

ELECTRICAL ENGINEERING

Courses

ELEC ELEC Numerical Methods and Optimization Units: 3.50

A balance of theory and practice in numerical methods and optimization. Topics include numerical representations, error analysis, iteration, linear algebraic tools such as a singular value and QR decompositions, interpolation, curve fitting, approximation, least squares, single and multivariable optimization, constraint optimization, integration, differentiation, and solving ordinary differential equations. Extensive computer programming using MATLAB. (21/0/0/21/0)

Requirements: Anti Requisites for ELEC 273

CEAB Units:

Mathematics 21
Natural Sciences 0
Complementary Studies 0
Engineering Science 21
Engineering Design 0

Offering Faculty: Fac of Engineering Appl Sci

ELEC 210 Intro Elec Circuits & Machines Units: 4.25

An introductory course for engineering students in disciplines other than electrical or computer engineering. The course begins with a review of the concepts of resistance, capacitance, and inductance. Circuit analysis techniques are then applied to characterize the behaviour of commonly used electrical energy conversion devices such as transformers, dc machines, and induction and synchronous machines.

COURSE DELETED 2018-2019

(Lec: 3, Lab: 0.75, Tut: 0.5)

Requirements: Prerequisite of APSC111 and APSC112 and APSC171 and APSC172 and APSC174 and registered in a BSCE or BASC Academic Program.

Offering Term: W

CEAB Units:

Mathematics 0

Engineering Design 0

Offering Faculty: Fac of Engineering Appl Sci

ELEC 221 Electric Circuits Units: 4.25

This course introduces the circuit analysis techniques which are used in subsequent courses in electronics, power, and signals and systems. Circuits containing resistance, capacitance, inductance, and independent and dependent voltage and current sources will be studied. Emphasis is placed on DC, AC, and transient analysis techniques.

(Lec: 3, Lab: 0.75, Tut: 0.5)

Requirements: Prerequisites: APSC 112 or APSC 114, APSC 171, APSC 172, APSC 174 Corequisites: MTHE 235 or MTHE 237 or MTHE 225 or MTHE 232 Exclusions:

Engineering Design 13

Offering Faculty: Fac of Engineering Appl Sci

ELEC 224 Continuous-Time Signals and Systems Units: 3.75

This is a first course on the basic concepts and applications of signals and systems analysis. Continuous time signals and systems are emphasized. Topics include: representations of continuous-time signals; linear time invariant systems; convolution, impulse response, step response; review of Laplace transforms with applications to circuit and system analysis; transfer function; frequency response and Bode plots; filtering concepts; Fourier series and Fourier transforms; signal spectra; AM modulation and demodulation; introduction to angle modulation.

(Lec: 3, Lab: 0.25, Tut: 0.5)

Requirements: Prerequisites: ELEC 221, MTHE 235 (MATH 235) or MTHE 237 (MATH 237) Corequisites: Exclusions: ELEC 323

Offering Term: W

CEAB Units:

Mathematics 12
Natural Sciences 0
Complementary Studies 0
Engineering Science 33
Engineering Design 0

Offering Faculty: Fac of Engineering Appl Sci

**ELEC 252 Electronics I Units: 4.25**

This course is an introduction to semiconductor electronics for students in the Electrical Engineering program and related programs. Topics studied include: operational amplifiers; dc and small signal models for diodes, basic principles of bipolar transistors and field effect transistors, dc analysis of electronic circuits and practical applications of the devices to the design of power supplies, amplifiers and digital logic circuits.

(Lec: 3, Lab: 0.75, Tut: 0.5)

ELEC 254 Introductory Electronics Units: 2.50

Offering Faculty: Fac of Engineering Appl Sci

ELEC 270 Discrete Mathematics with Computer Engineering App Units: 3.50

Introduction to the mathematics of representing and manipulating discrete objects. Topics include numbers, modular arithmetic, counting, relations and graph theory. Methods of proof and reasoning - such as induction and mathematical logic - will also be covered. Some applications to cryptosystems, hashing functions, job scheduling, and coding will be included.

(Lec: 3, Lab: 0, Tut: 0.5)

Requirements: Prerequisites: APSC 142 or APSC 143 or MNTC 313 Corequisites: Exclusions:

Engineering Design 0

Offering Faculty: Fac of Engineering Appl Sci

ELEC 299 Mechatronics Project Units: 1.50

A team design project based around an autonomous, programmable, robotic vehicle. Students explore different sensors and software strategies for vehicle control and navigation, in addition to wiring up sensor and motor circuits. The design goal is to configure and program a vehicle to accomplish a specified task. A final project report that documents the experimentation, design, and testing must be produced.

K1.5(Lec: No, Lab: Yes, Tut: No)

ELEC 310 Introductory Analog Electronic and Digital Circuits Units: 4.50

This is an introductory course on the design of analog electronic and digital logic circuits, using commonly available devices and integrated circuits. The properties of linear circuits, with particular reference to the applications of feedback, are discussed; operational amplifiers are introduced as the fundamental building block for the design of linear filters and amplifiers. Fundamentals of digital circuits including Boolean algebra, logic gates, combinational logic, sequential logic concepts and implementation are presented. Data acquisition and conversion is introduced, and the issues of noise and electromagnetic compatibility are discussed. Laboratory work is linked with lectures and provides practical experience of the subjects covered in lectures.

COURSE DELETED 2018-2019

(Lec: 3, Lab: 1, Tut: 0.5)

Requirements: Prerequisites: ELEC 210 or ELEC 221

ELEC 324 Discrete-Time Signals and Systems Units: 4.00

This second course on signals and systems studies basic concepts and techniques for analysis and modeling of discrete-time signals and systems. The topics of this course are: sampling, reconstruction, and digitization; representations and properties of discrete-time signals and systems; linear time-invariant (LTI) systems; difference equations; discrete Fourier series; discrete-time Fourier transform; discrete Fourier transform; z-transform; analysis of LTI systems; filtering and spectral analysis. Computational realizations of the analysis tools and their applications are explored in the laboratory.

(Lec: 3, Lab: 0.5, Tut: 0.5)

Engineering Science 27

Engineering Design 18

Offering Faculty: Fac of Engineering Appl Sci

ELEC 353 Electronics II Units: 4.25

Transistor-level modeling and design of analog and digital electronic circuits. Differential amplifiers, Gilbert Cell multipliers, multi-stage amplifiers, amplifier frequency response, negative feedback amplifiers, LC-tank and crystal oscillators, two-port networks. Advanced concepts in logic design. Students learn the basics of computer aided design (CAD) of integrated circuits including schematic simulation, layout, design rules, layout versus schematic verification and extracted circuit simulation. Laboratory work is design-oriented and students are introduced to advanced test and measurement techniques using vector network analyzers.

(Lec: 3, Lab: 0.75, Tut: 0.5)

Requirements: Prerequisites: ELEC 252, ELEC 224 or MREN 223 or MTHE 334 Corequisites: Exclusions:

Engineering Design 21

Offering Faculty: Fac of Engineering Appl Sci

ELEC 390 Principles of Design and Development Units: 3.50

The goal of this course is to prepare students for definition, design, management, and development of engineering projects and products. Students will learn about problem definition and impact analysis from an economic standpoint as well as other perspectives. Different design principles, management techniques, and development methodologies will be described. Culture and communication in teams will be discussed, followed by important concepts in ethics and intellectual property. Specific software and tools that are available for facilitating design/development activity will be introduced and utilized throughout the term. Students will apply concepts and explore issues through projects and laboratory activity.

K3.5(Lec: Yes, Lab: Yes, Tut: Yes)

ELEC 431 Power Electronics Units: 3.25

This course introduces the basic concepts of power electronics, which include power semiconductor devices and switching power converters. Emphasis is placed on the analysis and design of various power electronics circuits. Their industrial application, such as in telecommunications and computing, will also be discussed. More specifically, the course will cover the characteristics of switching devices, especially that of MOSFET. The course will also cover the operation of various switching converters such as phase controlled ACto- DC converters, AC voltage controllers, DC-to-DC switching converters, DC-to-AC inverters and switching power supplies. The requirements and configurations of power systems for telecommunications will be introduced. The techniques to analyze and design these power systems using available components will also be discussed. Computer simulation will be used to analyze the detailed operation of switching converters.

ELEC 448 Introduction To Robotics Units: 3.50

Robotics is an interdisciplinary subject concerning areas of mechanics, electronics, information theory, control systems and automation. This course provides an introduction to robotics and covers fundamental aspects of modeling and control of robot manipulators. Topics include history and application of robotics in industry, rigid body kinematics, manipulator forward, inverse and differential kinematics, workspace, singularity, redundancy, manipulator dynamics, trajectory generation, actuators, sensors, and manipulator position and contact force control strategies. Applications studied using MATLAB/Simulink software simulation and laboratory experiments.

(Lec: 3, Lab: 0.5, Tut: 0)

Requirements: Prerequisites: Corequisites: ELEC 443 or MTHE 332 or MECH 350 Exclusions: MECH 456

Offering Term: F

CEAB Units:

Mathematics 0

Natural Sciences 0

Complementary Studies 0

Engineering Science 16

Engineering Design 26

Offering Faculty: Fac of Engineering Appl Sci

ELEC 451 Digital Integrated Circuit Engineering Units: 3.25

Review of MOS transistor structure and operation; overview of wafer processing and device implementation, layout and design rules. CMOS gate design; static and dynamic logic; modelling of transients and delays. Clocked circuits; interconnect effects, and I/O. Memory and programmable logic arrays. Technology scaling effects; design styles and flow.

NOT OFFERED 2022-2023

(Lec: 3, Lab: 0.25, Tut: 0)

Requirements: Prerequisites: ELEC 252 , ELEC 271

Corequisites: Exclusions:

Offering Term: F

CEAB Units:

ELEC 455 Electronic Circuits In Comms. Units: 3.00

Offering Term: F

Offering Faculty: Fac of Engineering Appl Sci

ELEC 457 Integrated Circuits and System

Application Units: 3.25

In the first part of this course modern microelectronic circuits are covered and in the second part these circuits are used in new and emerging applications. Topics include: active and passive filtering circuits, phase locked loops, frequency synthesizers, RF modulators, clock and data recovery circuits, RF energy harvesting, ultra low-power circuits, biotelemetry systems, biological sensors, neurostimulator circuits, introduction to radiometry and radar imaging.

(Lec: 3, Lab: 0.25, Tut: 0)

Requirements: Prerequisites: ELEC 353, ELEC 224 or ELEC 323 or MTHE 335 Corequisites: Exclusions:

Offering Term: F

CEAB Units:

Offering Faculty: Fac of Engineering Appl Sci

ELEC 459 Solid-State Electronics Units: 3.00

Offering Term: W

Offering Faculty: Fac of Engineering Appl Sci

ELEC 461 Digital Communications Units: 3.50

Representation of signals and noise, Gaussian processes, correlation functions and power spectra. Linear systems and random processes. Performance analysis and design of coherent and noncoherent communication systems, phase-shift-keying, frequency-shift-keying, and M-ary communication systems. Optimum receivers and signal space concepts. Information and its measure, source encoding, channel capacity and error correcting coding.

NOT OFFERED 2022-2023

(Lec: 3, Lab: 0, Tut: 0.5)

Requirements: Prerequisites: ELEC 324 or MTHE 335, ELEC 326 or MTHE 351, or permission of instructor

Corequisites: Exclusions:

Offering Term: F

CEAB Units:

Mathematics 0

Natural Sciences 0

Complementary Studies 0

Engineering Science 21

Engineering Design 21

Offering Faculty: Fac of Engineering Appl Sci

ELEC 464 Wireless Communications Units: 3.00

Fundamental principles and practice of current wireless communications systems and technologies. Historical context, the wireless channel including path loss, shadowing, fading, and system modes in use. Capacity limitations on transmission rate, transmission of data by signaling over wireless channels via digital modulation, optimum receivers, countermeasures to fading and interference via diversity and equalization, multiple user systems including multiple access FDMA, TDMA, CDMA, FDMA/TDMA, uplink and downlink; capacity and power control, design of cellular networks. Selected standards and emerging trends are also surveyed.

(Lec: 3, Lab: 0, Tut: 0)

Requirements: Prerequisites: ELEC 324, ELEC 326

Engineering Science 18

Engineering Design 18

Offering Faculty: Fac of Engineering Appl Sci

**ELEC 470 Computer System Architecture Units: 3.50**

This course covers advanced topics in computer architecture with a quantitative perspective. Topics include: instruction set design; memory hierarchy design; instruction-level parallelism (ILP), pipelining, superscalar processors, hardware multithreading; thread-level parallelism (TLP), multiprocessors, cache coherency; clusters; introduction to shared-memory and message-passing parallel programming; data-level parallelism (DLP), GPU architectures.

(Lec: 3, Lab: 0, Tut: 0.5)

Requirements: Prerequisites: ELEC 371, ELEC 274 or CISC 221 Corequisites: Exclusions:

Offering Term: W

CEAB Units:

ELEC 483 Microwave and RF Circuits and Systems Units: 4.25

This course introduces the analysis and design of microwave components and systems. Topics include: modeling of high frequency circuits; transmission lines; scattering parameters; impedance matching; passive microwave components; amplifiers, mixers and oscillators; noise in receivers; elemental antennas and simple and phased arrays; communication links - microwave land, cellular and satellite systems; performance and link budget analysis. The laboratory work is design oriented and implements the lecture material.

(Lec: 3, Lab: 0.75, Tut: 0.5)

Requirements: Prerequisites: ELEC 353, ELEC 381 or

ELEC 486 Fiber Optic Communication Units: 3.75

This course introduces fundamental principles and applications of fiber optic communication systems. Topics include Fabry-Perot and distributed feedback semiconductor lasers, planar dielectric waveguides, propagation characteristics of single-mode optical fibers, p-i-n and avalanche photodiodes, and digital receiver performance. Device technology and system design applications are considered.

NOT OFFERED 2022-2023

(Lec: 3, Lab: 0.25, Tut: 0.5)

ELEC 490 Electrical Engineering Project Units: 7.00

Students work in groups of three on the design and implementation of electrical engineering projects, with the advice of faculty members. This course is intended to give students an opportunity to practice independent design and analysis. Each group is required to prepare an initial engineering proposal, regular progress reports, and a final report together with a formal seminar on the project and its results.

K7(Lec: Yes, Lab: Yes, Tut: Yes)

Requirements: Prerequisites: ELEC 324, ELEC 326, ELEC 353, ELEC 371, ELEC 372, ELEC 381, ELEC 390, or permission of the department Corequisites: Exclusions:

Offering Term: FW

Offering Faculty: Fac of Engineering Appl Sci

ELEC 491 Advanced ECE Thesis I Units: 6.00

Students will be assigned individual Research Topics. Students must work under the supervision of a faculty member. Grade will be based on the progress in arriving at a solution to the assigned problem.

COURSE DELETED 2021-2022

(Lec: 0, Lab: 6, Tut: 0)

Requirements: Permission of Thesis Supervisor

Engineering Science 54

Engineering Design 18

Offering Faculty: Fac of Engineering Appl Sci

**ELEC 492 Advanced ECE Thesis II Units: 6.00**

The students continue working on their assigned problems in ELEC 491 under the supervision of the same faculty member. Upon completion of their thesis, students must give oral and written presentations. Grades will be based on the quality of the analysis of the problem, the proposed solution, and written and oral presentations. Demonstration of effective written and oral communications skills is required.

COURSE DELETED 2021-2022

(Lec: 0, Lab: 6, Tut: 0)

Requirements: Prerequisites: ELEC 491 Corequisites:

Exclusions:

Offering Term: FW

Offering Faculty: Fac of Engineering Appl Sci

ELEC 497 Research Project Units: 3.50

The student works on a research project under the supervision of a faculty member. A research problem is formulated and the problem is contextualized within the discipline. The student does a current literature review, and explores in detail a solution to the research problem. Subject to Department approval.
