Students must successfully complete 30 credit units
comprised of 10 courses – 7 core courses of 3 units each and
a selection of 3 electives out of 4 offered, at 3 units each.
For most of the courses, the delivery will be a combination
of multiple asynchronous lectures and online tutorials, and
several synchronous webinars to summarize the learning
outcomes, conduct class discussions, review key concepts,
kick-off case studies, and have group presentations.

The courses EERL 801, EERL 802, EERL 803, and EERL 805 are
offered during the 1st and 2nd terms. EERL 804, EERL 809
and EERL 810 are offered during the 3rd term and EERL 806,
EERL 807, EERL 808, and EERL 811 are offered in the 4th and
5th terms.

Degree requirements are to be delivered via a blended
learning program, containing both residential and online
components. The overall program will be primarily online:
residential mix for conventional lecture, applied/experiential
learning, case analysis, integrated learning, and project work.

Students will begin the program with an intensive residential
session of 5 full days, during which they will be introduced to
all the courses and given an overview of specific topics that
will be covered in greater depth throughout the remainder
of the program. A second residential session will occur
in summer term during which students will complete the
residential course Economic Essentials (Part II), with Part I
being delivered entirely online in the preceding Fall term. The
fourth and fifth terms is when electives and an online core
course will be completed. Should the student choose as an
elective the Field-based Synthesis course this will require an
approximate 8 day face-to-face site visit.
