The Master of Health Professions Education program provides health professionals with a focused program to address the diverse teaching needs within a clinical or health related setting. This program draws from the experiences and expertise within Medicine, Nursing, Rehabilitation Therapy, and across the institution. Specifically, the program is targeting those individuals already employed in the health professions sector to fill a gap between their clinical knowledge and teaching skills within an academic health setting.

This program provides a bridge for health professionals to acquire new competencies in both the theory and practice of teaching within clinical/health professions settings and skills on how to do research on their own teaching/student learning. This corresponds with external drivers from accreditation bodies, quality assurance processes, and the movement towards scholarly research on teaching and learning. Health professionals who take this program will be encouraged to independently apply the courses/programs to their own accreditation standards for professional development credits.

The program includes 8 courses, which are team-taught using a cohort-based and blended model of delivery. The first and fifth course are offered in person during a one-week summer intensive, 5 courses will be offered completely online, and the final course, a capstone project, will be designed to meet individual needs. This format will enhance the student experience and engagement in the learning process as it allows learners to identify an area that interests them and synthesize their learning in ways that are personally meaningful. The blended learning approach will also allow healthcare professionals the flexibility to increase their knowledge of health education while continuing to meet their professional work obligations.

Applicants to the program are accepted under the general regulations of the School of Graduate Studies and Postdoctoral Affairs.

HPE 804 Health Professions: Teaching & Learning in Collaborative Practice
To ensure the delivery of optimal care to patients, a collaborative practice approach to teaching, learning, and communication needs to be adopted across health teams. This course will explore best practices for facilitating learning, strategies for delivery of content, and ways of conducting assessments and evaluations to learners from varied health backgrounds. This course will explore common challenges such as communication, leadership style, self-awareness, mode of delivery, and dealing with difficult learners. Winter; online.

HPE 805 Simulation
The purpose of this course is to provide a comprehensive introduction to simulation for health professional educators. The history of simulation and the pedagogical theories and frameworks underpinning simulation-based education will be explored. Components of simulation design and how they impact learning will be examined and applied. Further, the role of simulation in assessment of competency, licensure, certification, and research will be discussed. 1-Week Onsite Intensive; August.

HPE 806 Indigenous Health Professions Education
This course provides health profession educators with an introduction to Indigeneity in healthcare professions. In the 2015 Truth and Reconciliation Commission of Canada: Calls to Action, number 22 states "we call upon those who can effect change within the Canadian healthcare system to recognize the value of Aboriginal healing practices and use them in the treatment of Aboriginal patients in collaboration with Aboriginal healers and Elders where requested by Aboriginal patients." This course will provide health profession educators with an overview of teaching from an indigenous perspective but also raise awareness of how to teach others within their clinical education setting. Fall; online.

HPE 807 Leadership in Health Professions Education
This course provides health profession educators with an introduction to leadership in healthcare professions. With the constantly evolving needs of healthcare systems, it is imperative that strong leaders drive the need for change and innovation. Course participants will be introduced to numerous concepts critical to healthcare leadership such as principles of change and innovation, conflict mediation, leadership identity, strategic planning, and design. Through readings, case studies, and individual and group activities, learners can expect to gain valuable skills and perspectives on healthcare education leadership and to apply their knowledge in a variety of professional contexts. Through a variety of engagement and reflection opportunities, participants will gain insight into their strengths and challenges to best leverage their leadership potential. Winter; online.

HPE 898 Project: Health Professions Education
The focus of this course is on the scholarship of integration, implementation, and application. The course will be guided by a faculty member at Queen's University and/or a mentor based in practice. Learners will identify their project by the end of the first year so that if ethical and administrative approvals are required there will be plenty of time to complete the project by the end of the program. Spring/Summer; online.
