

# GEOGRAPHY AND PLANNING

## GPHY 227 – Cities: Geography, Planning and Urban Life

<b>Contact Time</b>	1.5 hour lecture/1.5 active learning tutorial per week	
<b>Format</b>	Lectures and tutorials based on key texts, case studies, and active learning modules	
<b>Class Assessment</b>	Tutorial-based assignments	20%
	Thinking and Making the City 1	25%
	Thinking and Making the City 2	25%
	Final take-home exam	30%

### COURSE OVERVIEW

This course is an introduction to the city from a social science and humanities perspective, with particular insights from how urban geographers have approached the city. The majority of people around the world now live and work in cities and this course serves as an introductory class for how to understand the city and its place in the modern, globalizing world. GPHY 227 gives students the opportunity to learn about the city in the abstract, and apply concepts to specific case studies on topics such as gentrification, the digital city, urban natures, race and settler colonialism and urban economies. The course draws on examples from around the world, but with an emphasis on Canadian case studies.

The course is a required course for students in human geography and a foundation course for students pursuing a degree in urban planning and urban studies. The course is also designed as an elective course for students from a variety of backgrounds and programs, including General Arts and Science, Commerce and Engineering.

### LEARNING OUTCOMES

By the end of the course, you should be able to:

- Articulate the rationale for several approaches to urban geography and how it is possible to gain urban insights from each.
- Define the concepts of space, place, scale, urbanization, urbanism and planning and understand how they help us study cities from a geographical perspective.
- Describe current urbanization trends and projects for countries around the world, with a particular knowledge of the post WWII and contemporary Canadian urban context.
- Compare various approaches to land use, housing, and transportation issues.
- Demonstrate the integral role that space plays in shaping how urban residents express their social and cultural values.
- Analyze how cities are governed and how they could be more sustainable in the future.
- Demonstrate active listening skills to consider peers' perspectives and to articulate effective communication with peers.

### COURSE TOPICS

The course is an introduction to urban geography. It covers key concepts like urbanization, urbanism, planning, space, place, and scale. It draws on examples from North America and around the world. Themes covered include the process of urbanization; theories and approaches of urban geography; race and colonialism; urban economies; the built environment; inequality; social identity and urban space; urban nature; the digital city; urban politics; and urban futures.
