COURSE OVERVIEW
The course is an introduction to the city from a social science and humanities perspective, with particular insights on how urban geographers have approached the city. Most people around the world now live and work in cities and this course serves as an introductory class for how to understand the city and its place in the modern, globalizing world. GPHY 227 gives students the opportunity to learn about the city in the abstract, and apply concepts to specific case studies on topics such as gentrification, population decline, immigration, housing affordability, the digital city, sustainable land use, education, and transportation. The course draws on examples from around the world, but also offers Canadian case studies for students to engage.

The course is a required course for students in human geography and a foundation course for students pursuing a degree in urban planning and urban studies. The course is also designed as an elective course for students from a variety of backgrounds and programs, including General Arts and Science, Commerce and Engineering.

The unique feature of this course lies in its interdisciplinary approach to understanding the city.

The course material comes from a variety of book chapters, articles and webcasts. The main textbooks will be Jonas et al. (2015) Urban Geography: a critical introduction (Wiley) and Bunting et al. (2015) Canadian Cities in Transition (OUP) although this is subject to change.

LEARNING OUTCOMES
By the end of the course, you should be able to:

- Articulate the rationale for several approaches to urban geography and how it is possible to gain urban insights from each.
- Define the concepts of space, place, scale, urbanization, urbanism and planning and understand how they help us study cities from a geographical perspective.
- Describe current urbanization trends and projects for countries around the world, with a particular knowledge of the post WWII and contemporary Canadian urban context.
- Compare various approaches to land use, housing, and transportation issues.
- Demonstrate the integral role that space plays in shaping how urban residents express their social and cultural values.
- Analyze how cities are governed and how they could be more sustainable in the future.
- Demonstrate active listening skills to consider peers’ perspectives and to articulate effective communication with peers.

COURSE TOPICS
The course is an introduction to urban geography. It covers key concepts like urbanization, urbanism, planning, space, place, and scale. It draws on examples from North America and around the world. Themes covered include the process of urbanization, theories and approaches of urban geography; global, mega and migrant cities; urban economies; the built environment; inequality; representations of the city; social identity and urban space; marketing and city cultures; urban nature, the digital city, public space, urban politics; and urban futures.
