

HMRC-CREATE

Roles, Competencies, and Performance Indicators

Roles¹

The HMRC-CREATE training program prepares its trainees to be able to engage in a variety of professional activities or roles upon graduation, namely:

1. Bone and joint health researcher
2. Translational researcher
3. Commercialization partner
4. Leader and Manager
5. Professional

Competencies:

A *competency* is defined here as a set of skills, abilities, and related knowledge needed to perform a specific task or an activity within a specific function or role.

Column 1 of each table identifies the respective *competencies* supporting each role.

Performance Indicators

Performance Indicators define and measure *progress* toward the set competencies. They identify attitudes, behaviours, knowledge, and skills; highlighting the type of evidence that will help to verify the existence of each of the competencies. The performance indicators show professional development as a growth process (along a continuum) in three levels: (1) novice, (2) proficient, and (3) expert as shown under columns 2, 3, and 4 of the tables that follow.

These roles, competencies, and performance indicators are aligned to the goals, mission, and vision of the HMRC-CREATE program. The next section describes these in more detail.

¹ (HMRC-CREATE, 2010)

Completing the Competency Assessment Instruments

Instructions for Trainees

Following each role is a competency assessment instrument. Use these worksheets to determine/assess your *current* competencies.

Step 1: Assess Your Entry Level Competencies

Refer to column 2 of each table (competency assessment instrument) in the next section.

Indicate your *current* attitudes, skills, knowledge, and abilities related to each of the following competencies (these are your *entry-level competencies*).

Step 2: Determine your Level's Exit Competencies

Refer to columns 3, 4, 5, 6 of each table. The x on each column indicates whether that particular competency applies to your level and the expected level of performance that you should acquire by completing the HMRC-CREATE program (exit competencies). If a column is left blank that means that that particular competency doesn't apply to your level.

Step 3: Identify Learning Activities

Compare the results from Steps 1 and 2. The difference between the two (gaps) indicate your *learning needs* and *growth opportunities*. Note your areas of *strength* and areas that need *improvement*. This should guide your choice of program activities in the next step – selection of professional development modules.

Step 4: Identify Learning Activities

Refer to column 6 of each table. These show the core courses and complementary activities that relate to each competency. Refer to the program curriculum for descriptions, learning objectives, meeting times, and other details. Your choices will be incorporated in your customized learning plan.

Step 5: Submit Documentation

The trainee submit *signed copies* of the following documents to create.biomed@queensu.ca

- Completed Competency Needs Assessment (*beginning of program*)
- Professional Development Plan/Learning plan (*beginning of program*)
- Portfolio Review Worksheets (*multiple reviews depending on duration of one's program*)
- Completion and Certification Sign-off sheet (*end of program*)
- Complete exit survey (*end of program*)

Bone and Joint Health Researcher Role and Competencies

Role Description: A Bone and Joint Health Researcher demonstrates knowledge of clinical, scientific, and technical issues and effectively integrates biological, engineering, and information technologies in bone and joint health research.

Competencies	Performance Indicators		
	Novice	Proficient	Expert
Research Technologies	Identifies technologies used in Bone and Joint Health research.	Selects and operates various technologies integrated into one’s research project.	Demonstrates to others how to use various technologies in one’s research specialty.
Multidisciplinary Research	Participates in a research project.	Manages an Integrated Research Team project.	Successfully plans, manages, and completes an Integrated Research Team project.
Research Terminologies	Demonstrates knowledge of clinical, scientific, and technical terminologies.	Mastery of clinical, scientific, and technical terminology is evident in one’s research project.	Mastery of terminology is evident in multiple research presentations and publications.
Research Experimentation	Uses existing experimentation methods to accomplish a research goal.	Participates in determining appropriate experimentation methods.	Leads research team in evaluating the most appropriate experimentation methods.
Research and Evaluation Methods	Understands research and evaluation data using qualitative, quantitative, and mixed approaches.	Designs and implements research and evaluation data using qualitative, quantitative, and mixed approaches.	Evaluates the validity and reliability of research using qualitative, quantitative, and mixed approaches.

Translational Researcher Role and Competencies

Role Description: A Translational Researcher recognizes key issues in clinical practice and effectively disseminates research into practice.

Competencies	Performance Indicators		
	Novice	Proficient	Expert
Health care delivery	Understand the processes and models of health care delivery.	Identifies the effect of health care delivery processes and models on one's research plan.	Leads research team and other stakeholders in navigating the health care delivery processes.
Clinical Practices	Can identify challenges related to the evaluation, diagnosis and treatment of patients with mobility limitations.	Identifies potential solutions from the literature to address challenges related to the evaluation, diagnosis and treatment of patients with mobility limitations.	One's research provides potential solutions to challenges related to the evaluation, diagnosis, and treatment of patients with mobility limitations.
Clinical Research	Identifies research questions in the literature or in one's project addressing clinical problems in bone and joint health.	Formulates and justifies research questions addressing clinical problems in bone and joint health.	Evaluates research questions addressing clinical problems in bone and joint health.
Research Planning and Execution	Identifies relevant scientific, clinical, and technical literature for a research project.	Plan and execute scientific, clinical, and technical literature review for a research project.	Plans, executes, and effectively communicates scientific, clinical and technical literature review for a research project.
Research Dissemination	Effectively disseminate research to a local audience (class presentation or HMRC or other seminar).	Effectively disseminates research in local and national audiences in multiple formats (class presentation, seminar, conference, journal article).	Effectively disseminate research in local, national, and international audiences (class presentations, seminars, conferences, journal articles).

Translational Researcher Role: Competency Assessment Instrument

Levels of competence: Novice (N) Proficient (P) Expert (E)

Translational Researcher Role	Entry Level Competence (Trainee to complete)			Program Completion Performance Indicators (Exit Competencies)				Learning Plan (PDP) Activities (Refer to the curriculum for more information)

Commercialization Partner Role and Competencies

Role Description: A Commercialization Partner is knowledgeable in the practices of medical product commercialization associated with research outcomes in bone and joint health technologies.

Competencies	Performance Indicators		
	Novice	Proficient	Expert
Intellectual Property Protection and Management	Demonstrates awareness of how to protect and manage intellectual property.	Protects and manages intellectual property in one’s research project.	Models the use of best practices in protecting and managing intellectual property.
Commercialization Concepts	Uses limited commercialization vocabulary and can explain the concept of commercialization.	Appropriately uses commercialization vocabulary and concepts and can give examples of related research commercialization practices.	Applies commercialization vocabulary and concepts to explain potential uses of one’s research in commercialization.
Pathways for Commercialization	Identifies from the literature pathways for commercialization and business models.	Identifies specific business models and pathways for commercialization used by related researchers (case studies).	Selects a potential commercialization strategy/business model for one’s research and may choose to participate in a commercialization practice.
Medical Device Regulation	Can explain the principles of medical device regulation.	Takes into account the safety, quality, and principles of medical device regulation in one’s research.	Ensures one’s research upholds safety and quality standards of medical devices and applies local and global principles of medical device regulation.
Product Development	Identifies general cultural, safety, performance, and regulatory issues associated with medical product development and availability.	Identifies specific cultural, safety, performance, and regulatory issues associated with medical product development and availability related to one’s research project.	Ensures harmonization of cultural, safety, performance, and regulatory issues associated with medical product development and availability related to one’s research project.

Commercialization Partner: Competency Assessment Instrument

Leadership and Management Role and Competencies

Role Description: Leads others to achieve set goals through effective management of professional and personal roles.

Competencies	Performance Indicators		
	Novice	Proficient	Expert
Communication	Communicates with peers clearly in multiple ways (active listening, presentation, and written).	Effectively communicates with both peers and lay people in multiple ways (active listening, presentation, and written).	Is called upon to give presentations and to represent one's research team to both peer and lay audiences.
Values Diversity	Respects and appreciates the value for diversity and inclusion.	Is engaged in projects that have diverse team membership.	Welcomes diverse members in one's team and leads diverse team projects.
Resource Acquisition and Management	Identifies resource management strategies and maintains work-related records.	Effectively manages time and material resources.	Writes grants and effectively manages time, fiscal, and human, and material resources.
Project Management	Identifies strategies for planning to maintain a clear scope of one's work.	Plans and maintains a clear scope of one's/team's work for effective implementation.	Manages and mentors team members in planning and maintaining a clear scope of work for effective implementation.
Media Relations	Recognizes the role of media in research, leadership, and management.	Participates in identifying appropriate media relations strategies to lead and manage.	Leads team(s) in engaging various media relations strategies (multimedia channels) to lead and manage projects.
Mentorship	Engages in a mentoring relationship as a mentee.	Is actively engaged in mentoring relationships as a mentee and as a peer-mentor.	Is actively engaged in mentoring relationships (as a mentee and as a peer-mentor) within and beyond Queen's.
Social Responsibility	Participates in a volunteer opportunity within campus.	Is actively engaged in various service projects including student-/professional- /community organizations.	Leads service projects and is actively engaged in student-/professional- /community organizations, committees, peer reviews, mentoring, etc.

Professional Role and Competencies

Role description: A Bone and Joint Health Professional demonstrates attitudes, knowledge, and behaviour that represent the highest standard of research and practice integrating ethical, social responsibility, developmental, and regulatory considerations.

Competencies	Performance Indicators		
	Novice	Proficient	Expert
Ethical Research Considerations	Identifies ethical issues related to human and animal research.	Participates in guided design and implementation of an ethically sound research study.	Leads and evaluates the design and implementation of an ethically-sound research study to ensure that the highest ethical standards are met.
Regulatory, Policy, Social, and Cultural Considerations	Identifies key regulatory, legislative, policy, social, and cultural issues in research.	Designs and implements research protocols that consider regulatory, policy, social, and cultural issues.	Evaluates and anticipates regulatory, policy, social, and cultural issues pertaining to one's research and identifies potential solutions.
Professional Conduct	Demonstrates knowledge of professional codes of conduct in Science and Engineering.	Complies with professional codes of conduct in Science and Engineering.	One's attitudes and practices model the highest professional behaviour and always abide by professional codes.
Interpersonal Skills	Identifies the value of interpersonal skills.	Relates effectively with one's peers and internal stakeholders.	Relates effectively with one's peers and diverse internal and external stakeholders.
Inter-professional Collaboration	Identifies the value for inter-professional collaboration and team work.	Is engaged in inter-professional collaborative projects.	Initiates new relationships and maintains existing ones by identifying opportunities for effective inter-professional collaboration.
Personal Development	Recognizes personal needs (learning and work-life balance) and development strategies.	Recognizes personal needs (learning and work-life balance) and creates a personal growth plan.	Recognizes personal needs (learning and work-life balance), creates, and successfully implements personal growth plan.
Teaching and Training	Articulates the value of developing others.	Instructs a peer on how to conduct select tasks in one's area of specialty.	Facilitates a class session and/or training in one's area of specialty.
