RESPONSIBLE INVESTING
REQUEST FOR INFORMATION
PREAMBLE

In accordance with Queen’s University’s Responsible Investing Policy, as approved in May 2017, we require all of Queen’s External Investment Managers to take due regard of environmental, social, and governance (“ESG”) factors in making investment decisions. Managers will be asked to engage where appropriate and report to the University on their ESG activities on an annual basis.

Link to Responsible Investing Policy:

To assist with our due diligence, we request that you respond to the following questions no later than August 21, 2020.

Note: Responses to this questionnaire will be posted in full on Queen’s website.

GENERAL

1) Please provide your ESG-related policies.

Fisher Investments (FI)* considers environmental, social and governance issues in our investment and portfolio construction process. Additionally, we regularly screen and tailor our investment approach for separately managed accounts depending on any particular social and/or environmental guidelines mandated by the client. Please find our ESG Policy Statement in the attachments.

* Fisher Asset Management, LLC, doing business as Fisher Investments (FI) is an investment adviser registered with the Securities and Exchange Commission. As of June 30, 2020, FI and its subsidiaries managed over $167 billion CAD. CAD asset values were calculated by using the USD-CAD exchange rate as of the dates indicated. Source: FactSet. All assets, as of June 30, 2020, in this document are preliminary and subject to final reconciliation of accounts. FI and its subsidiaries consist of four business units – Fisher Investments Institutional Group, Fisher Investments US Private Client Group, Fisher Investments Private Client Group International, and Fisher Investments 401(k) Solutions Group.

The Investment Policy Committee (IPC) is responsible for all investment decisions for the firm’s strategies.

2) Are sustainable investing and ESG factors integrated into your investment process and portfolio management decisions? If yes, please provide details.

Yes. FI evaluates and integrates ESG factors at multiple stages throughout the investment process. Qualitative analysis of political and economic drivers at the country and sector level is at the genesis of FI’s top-down investment process. We consider political and economic information potentially affecting the performance of securities as part of this analysis. Throughout the course of our top-down investment process, we research potential ESG risks or opportunities presented by individual
countries or sectors. Our analysis of global political drivers can influence security selection tied to potential political or regulatory risks companies face. Our unique investment process seeks to avoid, or significantly underweight, countries presenting an inordinate risk to our ability to generate sustainable, long-term out-performance.

Top-Down ESG Investment Process

ESG factors are among the many drivers considered by FI’s Capital Markets Analysts and FI’s IPC when developing country, sector and thematic preferences. Our process begins with a top-down approach, in which we apply capital markets technology (i.e., proprietary research tools) to the analysis of a wide range of economic, political and sentiment drivers to formulate forecasts and develop portfolio themes. The strategy attempts to capitalize on style and sector cycles as they come into and out of favor. At this stage in the investment process, FI’s Capital Markets Analysts, working with FI’s IPC, evaluate how ESG issues may affect portfolio themes.

Our emphasis in understanding the dynamics of political outcomes provides insights on how ESG issues affect equities. We monitor key social policies driving wealth creation and economic growth, including infrastructure investment, tax policy, free trade, property rights and government reform, as well as social factors. Political factors affecting these social policies are also integral to our top-down analysis (e.g., election cycles, legislative gridlock, etc.), and we maintain a keen awareness of regulatory risk. Additionally, environmental factors frequently influence our Capital Markets research. Our Analysts monitor advancing energy efficiency (especially within Industrials and Technology companies), nuclear power risks, resource extraction implications (e.g., labour strikes and resource nationalization) and litigation risk tied to environmental impact, among other factors.

FI’s IPC, with the assistance of FI’s Securities and Capital Markets Analysts determines the materiality of the ESG considerations as they pertain to countries, industries or individual securities. These ESG factors are incorporated into the sector and country weight preferences as well as individual security selection. FI’s investment strategy and positioning reflects the firm’s outlook over the next 12-18 months. Determinations on the materiality of ESG factors by FI’s IPC, as with market forecasting, are generally assessed over this same timeframe.

ESG Bottom-Up Integration

We evaluate ESG issues on a case-by-case basis, and are willing to consider the potential impact of all types of ESG concerns. In particular, we routinely evaluate a range of governance issues and off balance sheet risks as part of our stock selection analysis. These include consideration of a company’s auditors and whether their opinions are qualified or they have potential conflicts of interest, shareholder concentration, review of regulatory filings, and review of news flow from a wide range of sources for potential ESG concerns.

FI’s Securities Analysts then perform qualitative, fundamental research on prospective investments to identify securities with strategic attributes most consistent with the firm’s top-down views and with competitive advantages relative to their defined peer group. The fundamental research process involves reviewing and evaluating a range of ESG factors with FI’s IPC prior to purchasing a security with the goals of identifying securities benefitting from ESG trends and avoiding those with underappreciated risks. These factors include, but are not limited to, shareholder concentration, corporate stewardship, environmental opportunities and liabilities, and human or labor rights controversies. In situations where security level issues violate a client mandated ESG policy or present
an inordinate risk to a company’s operational or financial performance, or the firm believes they present undue headline risk to share price performance, FI would choose not to invest in that company.

In addition to identifying ESG risks we also seek to identify a company’s positive ESG attributes to help select securities that will likely benefit from continuing ESG improvements as well as ongoing ESG trends.

3) a) Are you a signatory to the UNPRI?

Yes

b) If you are signatory to other coalitions, please list them.

Please see below for a list of international initiatives that FI (or its subsidiaries) have joined:

- In 2014, FI became a signatory to the PRI.
- In 2018, Fisher Investments Japan Limited, a wholly-owned subsidiary of FI, is a signatory of the Japanese Stewardship Code.
- In 2019, FI joined the UN Global Compact, became a Carbon Disclosure Project signatory, became a signatory to the Climate Action 100+, and became a supporter of the Task Force on Climate-related Financial Disclosure (TCFD).
- In 2020, FI became a member of the Emerald Circle.

c) Indicate any other international standards, industry guidelines, reporting frameworks, or initiatives that guide your responsible investing practices.

Please see question 3) part b above.

4) Please describe how ESG oversight and integration responsibilities are structured at your firm, including the process for escalation of key ESG issues. How do you obtain ESG information/data (e.g. public information, third party research, reports and statements from the company, direct engagement with the company)?

Responsible Investments Committee/Research Organization:

FI has a formal Responsible Investments Committee, consisting of Institutional Group and Portfolio Management Group leadership. This committee has been formed with the intent to advance FI’s ESG and Impact capabilities and make FI a market leader in ESG implementation. The Responsible Investments Committee is comprised of members of Portfolio Management Group (Research and Investment Policy Committee members) as well as the Engagement Team and ESG Program Manager within FIIG. Together, these ESG Specialists play a central role in the application of ESG considerations in the following areas of our process: investment research, guideline implementation and portfolio compliance. The key ESG specialists also serve as a resource for clients and prospective clients.
ESG Oversight and Escalation of Key ESG Issues

As part of our research process, ESG Analysts are responsible for being informed about current and developing ESG trends, and briefing the IPC when appropriate. Moreover, the ESG Analysts works with our ESG data providers to help ensure quality and comprehensive ESG data is available for our decision-making and monitors the consistent application of ongoing ESG analysis for individual securities. The ESG Analysts also is responsible for providing training on ESG issues to all Analysts and Institutional Relationship Managers.

FI uses various databases and information vendors to aid and augment our proprietary internal ESG research, including MSCI ESG Research (including MSCI Business Involvement Screening, MSCI Norms & Controversies and MSCI Carbon Metrics), Morningstar Sustainalytics Fund Globe Ratings, Bloomberg, and FactSet to access ESG information. To aid ESG proxy voting, FI utilizes ISS (Institutional Shareholder Services, Inc.). Furthermore, we envision future collaboration with ESG aware FI clients to address specific ESG issues through proxy voting. FI also actively interacts with members of the ESG community. For example, FI employees attend numerous ESG- and SDG-related conferences, work with PRI to implement ESG best practices, and a member of the IPC sits on the Sustainable Development Goals in Active Ownership Working Group.

5) What channels do you use to communicate ESG-related information to clients and/or the public? Do you produce thought leadership (written reports and publications)? If so, is the information available to the public? Please provide links, if applicable.

FI produces a number of ESG reports and can customize reporting to the client’s needs. We frequently provide clients with reporting in the desired format and frequency. Below are a few examples of ESG reporting that FI currently provides:

• Bi-annual ESG newsletter
• ESG Quality Score Reporting
• Carbon Impact Report
• Environmental Analysis
• Engagement Examples

We can generally provide reporting on some extra-financial/ESG aspects as part of standard reporting and are pleased to customize reporting for our requirements whenever possible.

Firm level engagement and proxy voting reports are uploaded to the company website annually (link: https://institutional.fisherinvestments.com/en-us/process/esg). Additionally, we publish ongoing commentary on our website for a variety of ESG topics (link: https://institutional.fisherinvestments.com/en-us/research)
6) Do you have periodic reviews of your ESG process/approach to assess its effectiveness? What are the results? What would cause you to disregard ESG issues in your investment/analysis decisions?

Yes. Developing and continuously improving our ESG resources and capabilities is a high priority for FI, in order to meet our client demands in implementing ESG. While the majority of our efforts are designed to be forward-looking and increase future performance, we frequently set aside time for critical evaluation of past periods, as continuous improvements of the investment process is one of FI’s core tenets. This is the case in times of outperformance as well as underperformance. A primary goal is to identify new factors which may impact future performance, as well as biases in our own management approach, which may be limiting returns.

FI has been managing accounts with various thresholds of environmental and social mandates for over two decades, and over that time has continuously devoted additional resources toward advancing our ESG efforts. Over the last three years we have grown our designated ESG Research staff from one professional to five, and an IPC member. Within our ESG Research Analysts two are fully dedicated to ESG research*. Additionally, we have expanded our base of ESG research and tools in order to better meet client ESG demands. In conjunction to internal reviews, the PRI annual assessment report grants us the opportunity to determine our areas for improvement. FI’s assessment grade has improved over the last several years, which is reflective of the additional resources dedicated to firm-wide ESG efforts. On the 2020 Assessment Report, FI received A+ scores on the Strategy & Governance, and Incorporation, and an A on the Active ownership module. FI greatly values these opportunities as we are dedicated to continually improving our ESG capabilities.

Generally we would not disregard ESG issues during investment decision-making, rather ESG issues are integral part of overall stock analysis. If the IPC were to disagree on an ESG concern, there would be an iterative process of further information gathering and debate on the matter. This would include interaction with the Research Analysts and an effort to find information that supports or refutes both arguments. As the Co-CIO’s of the firm, Ken Fisher and Jeffery Silk have veto power, although in practice this would be utilized extremely rarely in the investment process.

If a collective agreement or decision is not reached then we would ultimately have lower conviction on that particular theme, weighting or stock decision.

*IPC members and Research Analysts are generalists and devote their efforts to all the firm’s strategies.

CLIMATE

7) Describe how you identify, assess, and manage climate-related risks.

FI considers both direct and transition risks and opportunities on the organization and its primary activities related to investment management. While the direct climate-related risks to our organization are limited, FI does consider such risks throughout the investment process. Within portfolios, for example, we review the impact of climate-related legislation and shifting consumer and investor preferences on country, sector, and security decisions. FI assesses the risk of climate change
in the portfolio screening process, examining specific climate change sources such as toxic emissions, fossil fuel production, and fossil fuel use. Within ESG portfolios, carbon-related risks are more directly targeted by restricting various coal-fired utilities and mining companies involved in thermal coal extraction. Within Low Carbon portfolios, FI explicitly targets a carbon footprint reduction relative to a benchmark. FI continually reevaluates companies within the ESG portfolio for policy compliance; ensuring securities held in the ESG portfolio maintain socially responsible business practices.

8) Describe the climate-related risks and opportunities you have identified over the short, medium, and long term.

Generally speaking, we view climate change as a longer-term market consideration beyond the timeframe that we use in the investment decision (12-18 months). Such assessments are meant to improve the probability of alpha generation and are not driven by ideological preferences.

Viewing climate-risk as a longer-term market consideration allows us the potential to create winners and losers primarily through legislative action and innovative energy efficient solutions from private enterprise. Political examples would include multi-nation agreements on carbon reduction and various countries deemphasizing the use of coal in favor of alternative and cleaner energy sources. We believe the winners moving forward will likely be companies finding innovative and sustainable solutions for efficient energy production and consumption, in turn unlocking shareholder value. Long term risks and opportunities are those mostly associated with a broader transition from a carbon-based economy. Such risks and opportunities are systematic and not within our investment horizon.

9) Describe the resilience of your investment strategy, taking into consideration different climate-related scenarios.

FI became a supporter of the Taskforce on Climate-related Financial Disclosures in late 2019 and we have conducted scenario analysis/climate risk stress testing on very limited basis to date. The firm has engaged with data providers (e.g. MSCI ESG, Sustainalytics, Institutional Shareholder Services Inc. (ISS) to assess various climate scenario/stress test offerings. We expect our capabilities to complete more formal climate scenario analysis to increase over time. We do regularly review carbon foot print data (e.g. Carbon Emissions/Carbon Intensity) as part of efforts to monitor carbon related portfolio risks.

10) Do you track the carbon footprint of portfolio holdings?

Yes.

If yes, please describe the methodology and metrics used, and whether you have a set target for reducing the portfolio’s footprint.

FI is able to measure the carbon footprint for individual portfolios. This amount invested in the Russell 2000 Value index is responsible for annual emissions of 276 metric tons of carbon dioxide equivalent (tCO2e), compared to 134 tCO2e for the Queen’s University US Small Cap Value account*.

We utilize MSCI ESG Carbon Portfolio Analytics to measure the carbon intensity and carbon footprint of the portfolio. The portfolio currently has a lower carbon footprint than the benchmark and has so for several years given our views on the sectors responsible for a disproportionate amount of carbon
emissions. We do not, however, actively target a particular carbon footprint in non-Impact strategy portfolios.

We are able to partner with our clients and accommodate specific carbon mandates. FI considers the risk of potential climate related legislation and the risk of carbon emissions primarily by restricting various coal fired utilities and mining companies involved in thermal coal extraction. FI assesses the risk of climate change in the portfolio screening process, examining specific climate change sources such as toxic emissions, fossil fuel production, and fossil fuel use. FI continually reevaluates companies within the ESG portfolio for policy compliance, ensuring securities held in the ESG portfolio maintain socially responsible business practices.

* Source: MSCI ESG Research

11) What are your firm's emissions? Please demonstrate how/whether you are taking steps to reduce these scenarios?

FI’s most recent assessment on carbon emissions for our primary headquarters located in Camas, Washington was completed from August 2018 through July of 2019. The Energy Star benchmark report was provided through the Department of Energy and the Environmental Protection Agency’s Portfolio Manager Platform. Results showed carbon emissions annually for Building 1 was 17.3 pounds of CO2 per square foot and the building is 114,000 square feet. For Building 2, it was 9.44 pounds of CO2 per square foot annually and the building is also 114,000 square feet.

As a firm, Fisher is looking for ways to promote our green values both internally and externally to support our ESG efforts. FI’s established the Green Team in 2019, a group of volunteer employees from throughout the firm who have been tasked with answering the following opportunity statement – How can Fisher Investments improve our environmental impact? In other words, how can FI focus on the “E” in ESG, both in our company, on our campuses and amongst our employee base? The Green Team was first chartered with brainstorming potential “green ideas” big or small. The team was given about a month to research and gather as many plausible ideas as possible, and then presented them to a panel of Executive Vice Presidents. The result was four ‘buckets’ of ideas presented to the panel of EVPs, breaking down implementation into short, medium- and long-term stages. The Green Team pitched over twenty-five ideas in the following categories: building improvements, sustainability initiatives for campus buildings, human capital, and client and prospect meetings. Our progress on our sustainability initiatives will be reported in the second half of 2020.

DIVERSITY

12) Please provide the composition of your senior leadership team and board of directors, including women and visible minorities. How do you encourage diversity of perspectives and experience?

Our culture values and supports inclusivity and diversity. We hire from all educational and professional backgrounds and from locations around the world, creating diversity of thought and experience. While our work is not done, we are proud of the progress we've made:
- 85% of our employees report to Executive Vice Presidents (EVPs) who are women, people of color and/or identify as a member of the LGBTQ community.

- 60% of our Senior EVPs are women.

- 30% of our employees are women; 30% of our managers are women.

The firm's hiring practices for all employees, including new analysts or portfolio managers, is deeply rooted in growing talent from within. The firm provides a flexible career development path, allowing for both vertical movement within departments and horizontal movement to other departments. The firm encourages its employees to rotate across multiple disciplines as they grow their careers, offering breadth of experience in a variety of roles. We believe this approach results in a flexible, dynamic and deeply skilled workforce capable of quickly adapting to change and leading our investment management and client service efforts. Ever higher levels of responsibility are continuously available within and across operational units.

Our belief is that to succeed as a firm, we must have an inclusive culture, actively developing and supporting diversity, where all feel welcome and supported. Embodying these values across our organization is crucial to our vision, culture and success. A culture that celebrates and encourages diversity will allow each employee to build a lifelong career, and will help us better the investment universe. Since October 2019, the firm's Diversity & Inclusion (D&I) Task Force has taken the following actions:

- Established a partnership with Russell Reynolds & Associates (RRA), a leading D&I consultancy
- Initiated our Assessment and Learning Phase
- Completed an Employee Listening Tour across all offices
- Completed the All-Employee Inclusion Index Survey
- Piloted a manager training course on Inclusive Leadership
- Conducted a 360 Leadership Assessment of our EVPs and above

Most recently, we have also amended the firm's Mission Statement ("Vision") to include the following excerpt: "To succeed, we must have an inclusive culture, actively developing and supporting diversity across the vast spectrum of human differences, creating a place of authentic belonging for all."

Moving forward on this multi-year journey, we have also begun to establish a Roadmap to guide our efforts. Our short-term efforts will focus on the following:

- Measuring Progress: Consistent with our belief in metric-based accountability, we will establish a D&I benchmark, focused on financial services, and create metrics to evaluate our progress.
- Training:
  - We will provide foundational training in core D&I concepts to all employees.
o We will begin requiring D&I training as part of New Employee Orientation so all incoming employees are grounded in the same concepts.

o We will provide all managers with training on Inclusive Leadership to enhance the way we lead our groups and teams.

o All Executive Vice Presidents and above have already gone through individual Inclusive Leadership Assessments, conducted by RRA, and are working with them to create personal development plans.

• Recruiting:

o We will create a D&I page for our Careers website to broaden our appeal to candidates from all backgrounds and highlight our D&I values and programs.

o We will pursue an expanded Diversity Recruitment Strategy to broaden the top of the recruiting funnel and expand our reach to a more diverse candidate pool.

• Education & Celebration: We will create a firm-wide program to acknowledge and celebrate diversity and culture. It will include an educational element to broaden our collective understanding of others.

• Communication: We will create a D&I internal intranet site so there is a central repository for resources, to share regular updates, and will also include ways to elevate questions, ideas or concerns.

• Employee Resources: We will test creating Employee Resource Groups (also known as Affinity Groups). Due to remote work and social distancing constraints, we won’t immediately launch the groups but we will do the foundational work so we can launch once circumstances permit. We will initially test the groups below:

  o GEM (Gender Equality Matters)
  o Mosaic (Race & Ethnicity)
  o Pride (LGBTQ)
  o Able (Disabled; Differently-Abled)

---

**PROXY VOTING**

13) What proportion of the time do you vote with or against management on shareholder resolutions, board appointments, and auditor appointments? What proportion of the time do you vote with or against management on ESG issues? How does this break down for climate, diversity, and remuneration issues?

FI utilizes a third-party proxy voting service, Institutional Shareholder Services Inc. (ISS) as an advisory service and to manage the proxy voting process. ISS provides a vote recommendation, helping to ensure each agenda item is evaluated according to the client’s policy guidelines, and then helps ensure the ballot shares are counted by the corporate issuer. Throughout this process, members of FI’s Securities Operations team review the ballot handling and vote recommendations to help ensure the accuracy of the ballot reporting, and that the shares are being voted in line with the appropriate
policy. FI reserves the right to override ISS-provided recommendations. Please find the following voting results on the requested items:

Voting on Shareholder resolutions, Board appointments, and Auditor appointments
With management: 89.14%, Against management: 9.92%.

Voting on ESG Issues
With management: 51.28%, Against management: 41.88%

Voting on Climate/Health
With management: 35.85%, Against management: 49.06%.

Voting on Diversity
No reporting on Diversity.

Voting on Remuneration Issues
With management: 83.81%, Against management: 15.53%.

14) **What proportion of all independent ESG shareholder resolutions do you support?**

Our independent proxy vendor ISS does not differentiate management versus shareholder resolutions; however, FI has voted with management on 51.28% of ESG resolutions.

15) **What proportion of remuneration packages do you vote in favour of? In your view, is the current level of executive remuneration too high, too low, or about right? How is this view reflected in your voting record on remuneration?**

FI voted with management 83.81% of the time and against management 15.53% on executive remuneration. It’s not possible to make general statements about the absolute levels (too high, too low, or about right) of packages as each remuneration package should be reviewed in the context of the individual company, relative to peer companies and with respect to the alignment of said remuneration package to creating shareholder value.

16) **Have you ever co-filed an ESG-related shareholder resolution? If so, how many and with what frequency?**

FI has not filed or co-filed an ESG-related shareholder resolution.

17) **Have you ever voted against a director for explicitly ESG-related reasons? If so, why? If not, would you consider doing so in the future?**

FI currently does not track this data through our third-party proxy voting service, ISS. We generally vote for director nominees, except under the circumstances of insufficient board independence, diversity, expertise, responsiveness, accountability to shareholders.

ESG Questionnaire, 2020
ENGAGEMENT

18) How many companies do you engage with? What proportion of your engagements focus on environmental and social issues? What are your engagement goals? Are these goals outcome/action-based (e.g. decreases in emissions or increases in number of women on the board) or means-based (reporting on emissions or number of women on the board)?*

For the past 12 months ending June 30, 2020, FI initiated engagement dialogue with 86 companies. Typically, two-thirds of our engagements focus on environmental or social issues, however, FI launched an environmental engagement initiative in Q2 2020 that elevated the proportion to above 90%. FI determines on a case-by-case basis whether an outcome/action-based or means-based goal is applicable for a company being engaged.

19) What is your policy around the escalation of engagement; how and why might this happen and what is the ultimate tool you might use (e.g. voting against board re-election, etc.)?*

FI engages with companies as part of its fundamental analysis and to clarify or express concerns over potential ESG issues at the firm or industry level. FI also engages with company management on proxy voting issues, particularly when ISS is in disagreement with company management.

Depending on the issue, the IPC may engage in additional meetings with company management, intervene in concert with other institutions on the issue or meet with appropriate members of a company’s board. Our experience shows stewardship concerns are usually best resolved by direct, confidential contact with company officials—whether at the board or management level. Escalating an issue beyond that point depends on the materiality of the issue, the company’s responses to past communications and whether we believe such engagement is in our clients’ best interests.

* denotes questions quoted from or inspired by Cambridge’s Questions for Fund Managers.
ESG Policy Statement

Introduction
Fisher Investments (FI) considers environmental, social and governance (ESG) factors throughout the investment and portfolio construction process. Additionally, FI regularly screens and tailors the investment approach for separately managed accounts depending on the particular guidelines mandated by the client. The overall responsibility of implementation and fulfillment of the ESG policy rests with FI’s Investment Policy Committee (FI’s IPC).

ESG Philosophy
We believe ESG investors are best served by an investment process that considers both top-down and bottom-up factors. Integrating ESG analysis at the country, sector and security levels consistent with clients’ investment goals and ESG policies maximizes the likelihood of achieving desired performance and improving environmental and social conditions worldwide.

ESG History
FI has been managing accounts with various thresholds of environmental and social mandates for over two decades. Over that time, the firm has been able to satisfy our clients’ environmentally and socially responsible mandates without compromising its broader market outlook and themes. As of June 30, 2019, FI and its subsidiaries managed 60 accounts valued at over $19 billion USD with environmental, religious and/or socially-responsible investment (SRI) restrictions.

FI has been a Principles for Responsible Investment (PRI) signatory since 2014, and has provided a response to the UK Financial Reporting Council Stewardship Code. Further, Fisher Investments Japan, a wholly-owned subsidiary of FI, is a signatory of the Japanese Stewardship Code.

Fisher Investments evaluates and integrates ESG factors at multiple stages throughout the investment process.

1 Fisher Investments (FI) is an investment adviser registered with the Securities and Exchange Commission. As of June 30, 2019, FI and its subsidiaries managed over $113 billion. FI and its subsidiaries consist of four business units—Fisher Investments Institutional Group, Fisher Investments US Private Client Group, Fisher Investments Private Client Group International, and Fisher Investments 401(k) Solutions Group. The Investment Policy Committee (IPC) is responsible for all investment decisions for the firm’s strategies.

2 All assets as of June 30, 2019 are preliminary. Preliminary assets are subject to final reconciliation of accounts.
ESG factors are among the many drivers considered by FI’s Capital Markets Analysts and FI’s IPC when developing country, sector and thematic preferences. Governmental influence on public companies, environmental regulation, social policy, market reforms impacting private property, labor, and human rights are among ESG factors considered for all FI clients when determining country and sector/industry allocations and shaping an initial prospect list of portfolio positions.

FI’s IPC, with the assistance of FI’s Securities and Capital Markets Analysts determines the materiality of the ESG considerations as they pertain to countries, industries or individual securities. These ESG factors are incorporated into the sector and country weight preferences as well as individual security selection. FI’s investment strategy and positioning reflects the firm’s outlook over the next 12-18 months. Determinations on the materiality of ESG factors by FI’s IPC, as with market forecasting, are generally assessed over this same timeframe.

At a client’s discretion, FI is able to refine prospective security lists further by applying the firm’s or client-provided ESG screens to the list of prospective securities for separately managed accounts. Please reference the appendix for a sample of the firm’s ESG screens. FI’s screening process leverages MSCI ESG Research capabilities to identify and remove portfolio candidates involved in business activities deemed inconsistent with FI’s, or a client-provided, screens.
FI’s Securities Analysts perform fundamental research on prospective investments to identify securities with strategic attributes consistent with the firm’s top-down views and with competitive advantages relative to their defined peer group. The fundamental research process involves reviewing and evaluating a range of ESG factors with FI’s IPC prior to purchasing a security, seeking to identify securities benefitting from ESG trends and avoid those with underappreciated risks. These factors include, but are not limited to, shareholder concentration, corporate stewardship, environmental opportunities & liabilities, and human or labor rights controversies. FI would choose not to invest in companies when security level issues:

- violate a client mandated ESG policy or
- present an inordinate risk to a company’s operational or financial performance, or
- appear to present undue headline risk to share price performance

A material contribution of FI’s relative performance is derived from sector, country, style and thematic decisions. As such, FI does not expect ESG restrictions to materially impact expected risk or return characteristics of the strategies. FI believes its ESG-related research capabilities can help enhance portfolio relative performance—particularly in instances where exposure to countries, industries, and securities with material negative ESG risks are reduced.
Which categories and characteristics are appealing?

Which companies have liquidity or insolvency risk?

Are any companies disqualified based on clients’ ESG guidelines?

Are any companies inconsistent with the category or peer group?

What are the company’s competitive advantages?

Which strategic advantages best leverage our top-down views?

How is the company taking advantage of its strategic attribute?

Has the market fully discounted the company’s advantages in its share price?

What are the material risks to the security?

Monitoring & Elevations

ESG factors of portfolio holdings are continuously monitored and issues are elevated to FI’s IPC when appropriate.

Capital Markets Research Analysts monitor how ESG factors may affect high-level portfolio themes. FI monitors key social policies driving wealth creation and economic growth, including, but not limited to, infrastructure investment, tax policy, free trade, property, human, and labor rights, and government reform. Political factors affecting these social policies are integral to the top-down analysis, allowing us to be cognizant of the regulatory risk surrounding the ESG environment. Additionally, research analysts monitor thematic opportunities such as advancing energy efficiency (e.g., within Industrials and Technology companies) and thematic risks such as those related to nuclear power, resource extraction (e.g., labor strikes and resource nationalization) and litigation tied to environmental impact.

Securities Analysts monitor existing holdings as part of the ongoing research process and elevate meaningful deterioration or improvements of various ESG factors at the company level. Each Capital Markets and Securities Analyst has access to a suite of tools from MSCI ESG Research including MSCI ESG Ratings and Controversies. These specialized tools assist in identifying opportunities, risks and controversies at the company level. Additionally, analysts utilize various resources from MSCI ESG Research, Bloomberg, and FactSet to monitor holdings violating a client’s restrictions after purchase of the position, such as revenue generation in specific industries (gambling, weapons, alcohol, tobacco, etc.).

As a US entity, FI complies with US regulations, including the Office of Foreign Asset Control (OFAC) sanctions. FI’s Client Guidelines and Assurance (CGA) Team is responsible for both US and international sanctions monitoring. The CGA Team subscribes to various regulatory body alerts to help identify sanctioned entities. Additionally, FI retains outside legal counsel and employs third-party vendors such as MSCI to notify the firm of any changes or updates to sanctions. Sanctioned companies and countries are added to restricted lists in FI order management system, Eze OMS.

CGA is also responsible for monitoring any holdings violating a client’s restrictions before and after purchase of the position, such as revenue generation in specific industries (gambling, weapons, alcohol, tobacco, etc.) utilizing various resources from MSCI ESG Research, and FactSet. Any violations or potential violations are elevated to the IPC for review.

Engagement

FI engages with companies as part of its fundamental analysis and to clarify or express concerns over potential ESG issues at the firm or industry level. FI also engages with company management on proxy voting issues, particularly when Institutional Shareholder Services, Inc. (ISS) is in disagreement with company management. FI holds meetings with management as necessary to discuss any pertinent issues we feel are critical to analyzing the firm or better understanding peers or relevant industry factors. Information uncovered during engagement as part of the firm’s fundamental analysis can impact investment decisions and security determinations.

Additionally, FI’s Engagement Policy is available upon request.

Low Carbon/Impact Portfolios

In addition to integrating ESG factors into our regular investment process, FI also offers low carbon and impact portfolios to investors. Within low carbon portfolios, FI not only targets carbon related risks more directly by restricting various coal-fired utilities and mining companies involved in thermal coal extraction, but also explicitly targets a carbon footprint reduction relative to a benchmark.
Proxy Voting

FI utilizes Institutional Shareholder Services Inc. (ISS) as its third-party proxy service provider. ISS is one of the largest providers of corporate governance solutions with services including objective governance research and analysis, proxy voting, and distribution solutions.

Proprietary and third-party information, such as ISS, are used to help ensure adherence to a client’s standards. When FI votes proxies for clients, FI evaluates issues and votes in accordance with what FI believes will most likely help maximize shareholder value, unless otherwise expressly directed by clients. In most cases, FI is pleased to accommodate client voting guidelines on particular issues. For example, FI has the ability to vote proxies in accordance with ISS’s Socially Responsible Investment (SRI) Policy generally supporting shareholder proposals on social, environmental, and labor issues. There may be issues that could cause us to deviate from our standard voting policies. In the case of unique or novel proposals, issues are analyzed on a case by case basis. FI frequently engages with company management on proxy voting issues, particularly where ISS is in disagreement with management. In such cases, the IPC determines the appropriate course of action.

FI’s Proxy Voting Committee oversees the firm’s proxy voting and serves as the control point for decisions relating to proxy voting. The members of the Proxy Voting Committee include senior leadership from our Research, Portfolio Management, and Investment Operations groups. The Chief Compliance Officer is a non-voting member.

ESG Reporting

We are utilizing several ESG data providers such as MSCI ESG Research, Bloomberg, and FactSet that, when combined with our firm’s resources, allow for extensive ESG reporting on client portfolios. Reports available to clients may include ESG score reporting versus the benchmark, carbon footprint reporting, engagement reporting, as well as ESG attribution analyses.

Sources of Information

Throughout the research process, FI uses various databases and information vendors to aid and augment our proprietary internal ESG Research, including MSCI ESG Research (including MSCI Business Involvement Screening, MSCI Norms & Controversies, and MSCI Carbon Metrics), Morningstar Sustainalytics Fund Globe Ratings, Risk Metrics, Bloomberg, and FactSet. In combination with such tools and readily available public information from ongoing analysis of holding and portfolio candidates, FI is able to accommodate socially responsible and ESG client-mandated guidelines in separate accounts while adhering to our overall investment strategy.
Ongoing Learning

FI has designated one IPC member to oversee the continuing education of Research Analysts as it relates to ESG investing. In addition, FI has three appointed subject matter experts on FI’s Capital Markets Research and Securities Research team. Together, the IPC member and the ESG specialists play a central role in the application of ESG considerations in the following areas: investment research, guideline implementation and portfolio compliance. As part of the research process, the specialists are responsible for current and developing ESG trends and briefing FI’s broader IPC when appropriate. The specialists work with data providers to help ensure quality and comprehensive data is available for decision-making and the consistent application of ongoing ESG analysis for individual securities. These specialists are responsible for training analysts and Institutional Relationship Managers on ESG issues. We plan to continue holding regular ESG training sessions for our Analysts, Relationship Managers and Associates.

The ESG Analysts also serve as the liaison between our Research teams and the Institutional Relationship Managers. In addition, they help create ESG specific deliverables for our clients and prospective clients and provide clarity on how ESG is applied in our investment process.

FI’s formal Responsible Investments Committee develops and reviews our ESG policies and keeps apace of ESG industry developments. The Responsible Investments Committee meets regularly and consists of leadership from our Portfolio Management Group as well as our Institutional Client Services and Institutional Sales Teams, with the intention of making FI a market leader in ESG investing through ESG implementation. We strongly encourage other asset management industry participants interested in responsible investing to become a PRI signatory (https://www.unpri.org/about/becoming-a-signatory).

FI has an in-house team that handles client reporting requirements. FI can generally provide reporting on ESG aspects as part of the firm’s standard reporting, and is pleased to customize reporting as requested. FI’s latest Responsible Investment Transparency Report is publicly available on the PRI website (linked here).
FI is able to place restrictions in the following categories through negative screens for separately managed accounts using MSCI ESG Research and other data sources:

Appendix I - Sample of ESG Restrictions/ Guidelines

### Sampling of Optional Mechanical Screens

#### Defense and Weapons
- Biological/Chemical***
- Conventional*

* Maximum 5% of revenue.
** Companies that derive more than 30% of revenue or power generation.
*** Maximum 0% of revenue.
Investing one million dollars (CAD) in the Queen’s University US Small Cap Value account reduces a portfolio’s annual carbon impact relative to a portfolio tracking the Russell 2000 Value index.

This amount invested in the Russell 2000 Value index is responsible for annual emissions of 276 metric tons of carbon dioxide equivalent (tCO2e), compared to 134 tCO2e for the Queen’s University US Small Cap Value account.

This would represent a 51% reduction in annual carbon emissions and is equivalent to the following examples.

- 560,301 kilometers driven in cars
- 60,505 liters of gasoline consumed
- 330 barrels of oil consumed
- 70,494 kilograms of coal burned
- 67.6 hectares of forests in one year
- 3,642 tree seedlings grown for 10 years

FISHER INVESTMENTS INVESTOR RESPONSIBILITY & ENGAGEMENT TEAM

Fisher Investments regularly engages corporations on relevant environmental, social and governance issues, often seeking additional disclosure for investors or requesting that companies take steps to strengthen their ESG performance. Engagements are conducted by our Investor Responsibility & Engagement team and our Research Analysts.

Data indicated above are based on engagement meetings for all of Fisher Investments Institutional clients. For Professional Client Use Only. Past performance is never a guarantee of future returns. Investments in securities involve the risk of loss. Any investment program will always involve the risk of loss. Global investing can involve additional risks, such as the risk of currency fluctuations.

As an asset management firm, Fisher Investments (FI) manages investments in shares of a wide range of companies on behalf of our clients. These shares entitle the holders to vote on various issues put forth by the company and its shareholders at the company's annual meeting or at a special meeting.

The report above demonstrates how FI engages with company management on ESG issues: environmental issues include but not limited to: climate change, toxic emissions & waste, vulnerability to legislation and impact on local communities; social issues include but not limited to: animal rights, human rights, labor relations, controversial countries and controversial weapons and governance issues include but not limited to: routine business, corporate governance, board independence, executive compensation, corporate stewardship and bribery & corruption.

FI engages according to the Fisher Investments Engagement Policy. Identifying engagement opportunities is a part of FI’s fundamental analysis and to clarify or express concerns over potential ESG issues at the firm or industry level.

<tbody>
<tr>
<td>SECTOR:</td>
<td>INFORMATION TECHNOLOGY</td>
</tr>
<tr>
<td>ISSUE:</td>
<td>SOCIAL</td>
</tr>
<tr>
<td>DATE:</td>
<td>Q2 2020</td>
</tr>
</tbody>
</table>

Objective
Discuss impact of the COVID-19 pandemic on the company's business.

Engagement Details
After a discussion of Salesforce's financials and guidance, FI discussed the impact of the pandemic by segment and geography, including broad IT spending patterns, the company's approach to mergers and acquisitions and impact of granting customers financial flexibility.

Outcome
No additional follow up is planned.
SCHLUMBERGER

REGION: NORTH AMERICA
SECTOR: ENERGY
ISSUE: ENVIRONMENT
DATE: Q2 2020

Objective
Learn about Schlumberger’s sustainability programme and discuss alignment with the Paris Agreement.

Engagement Details
FI engaged Schlumberger to encourage alignment with the Paris Agreement. The company’s new CEO is positioning the company to be part of the energy transition and Schlumberger is the first O&G Company to commit to setting an emissions goal that aligns with the Science Based Target Initiative (SBTi). In addition, as of 2020 the company has incorporated its emissions reduction targets into the incentive programme for 1,500 members of senior management.

However, we note that Schlumberger does not have a methane emissions reduction target, nor has it yet published the results of its TCFD risk assessments.

Outcome
We will follow up with the company regarding the establishment of a methane emissions reduction target, publishing results of the TCFD analysis, and its progress in setting a SBTi-aligned greenhouse gas emissions target.
**EQUINOR ASA**

</tbody>
</table>

**Objective**
Discuss company strategy, including supply-demand dynamics and diversification into offshore wind.

**Engagement Details**
Equinor is focused on creating a portfolio of low-cost assets that can generate free cash even in an environment of low commodity prices. In response to industry headwinds, the company is focusing its gas production where pipelines already exist rather than building additional LNG infrastructure. In addition, the company prefers low-cost, conventional oil assets rather than unconventional shale oil projects in North America. Equinor is diversifying into offshore wind projects as the company believes it has a competitive advantage in the engineering and construction of complex projects. Offshore wind may become as much as 15% of capex for Equinor in the coming years due to this expansion. In February the company announced plans to be operationally carbon neutral by 2030 and cut its carbon intensity in half by 2050 (the latter target includes Scope 3 or “indirect” emissions).

**Outcome**
No additional engagements are planned.

<tr>
<td>DATE:</td>
<td>Q4 2019</td>
</tr>
</tbody>
</table>

Objective
Receive an update on company’s sustainability initiatives.

Engagement Details
Fisher Investments (FI) spoke with Home Depot about improving disclosure of ESG policies and performance. Home Depot has historically been slower than its competitors to adopt sustainable practices. It recently announced it is establishing an ESG Communications Team to improve its reporting and actively engage with shareholders, employees, and community stakeholders for input on these efforts.

One of Home Depot’s strengths is its best-in-class employee benefits, which are extended to part-time employees. Management reports a corresponding positive effect on retention—noting that 90% of its leadership roles are held by men and women who began in hourly positions. However, labor relations risks remain; the company has over 400,000 employees and has weathered controversies surrounding unpaid wages and wrongful termination. In addition, employees are not subject to collective bargaining agreements, which can increase the potential for future labor-related business disruptions.

Home Depot has established water and energy reduction targets, and includes the impact of customer use in its metrics. However, its progress is presented in an ad-hoc manner that makes it difficult to identify year-over-year trends. In many other places, the company uses aspirational statements to describe its expectations. While the company is considering a satisfactory range of issues, the lack of targets or monitoring for compliance leaves investors unable to assess their effectiveness in driving efficiencies or reducing supply chain risk.

Outcome
FI supports the establishment of dedicated team to respond to investor demand for greater transparency into sustainability initiatives. We intend to re-engage the company to encourage standardised ESG reporting.
ORACLE CORPORATION

<table>

</thead>
<tbody>
<tr>
<td>SECTOR:</td>
<td>INFORMATION TECHNOLOGY</td>
</tr>
<tr>
<td>ISSUE:</td>
<td>CORPORATE GOVERNANCE</td>
</tr>
<tr>
<td>DATE:</td>
<td>Q4 2019</td>
</tr>
</tbody>
</table>

**Objective**
Understand company priorities on the proxy vote.

**Engagement Details**
Oracle’s investor relations team reached out to Fisher to discuss proxy voting items at the upcoming shareholders meeting. In particular, the company wanted to focus on the proposed executive compensation package, in which management’s recommendation differed from ISS. We reviewed the structure of the compensation package and weighed management’s arguments that the package would help improve leadership continuity (the company is seeking stability after the death of one executive and the departure of another). We also examined ISS’ concerns about poor responsiveness from the company on prior say-on-pay proposals.

**Outcome**
FI voted in support of management.
ALIGN TECHNOLOGY, INC. AND ANTOFAGASTA COLLABORATIVE ENGAGEMENT WITH CDP

**Objective**
Request the companies report to the CDP using the organisation’s Climate, Water and/or Forest disclosure questionnaires.

**Engagement Details**
FI is participating in an environmentally-focused engagement initiative with approximately 60 companies, including Align Technology and Antofagasta. FI is a signatory to the CDP, a global disclosure network that allows companies, investors, cities and regions to manage their environmental impacts. Each year, CDP signatories request companies to disclose—via the CDP questionnaire—their policies and performance on climate change, water security and deforestation. In 2020 FI intends to lead collaborative engagement with approximately 20 companies and support engagement with nearly 40 more.

**Outcome**
This engagement initiative launched in May 2020 and is ongoing through August 2020.
Disclosures

1 Fisher Asset Management, LLC, doing business as Fisher Investments (FI) is an investment adviser registered with the Securities and Exchange Commission. As of June 30, 2020, FI and its subsidiaries managed over $167 billion CAD. CAD asset values were calculated by using the USD-CAD exchange rate as of the dates indicated. Source: FactSet. All assets, as of June 30, 2020, in this document are preliminary and subject to final reconciliation of accounts. FI and its subsidiaries consist of four business units – Fisher Investments Institutional Group, Fisher Investments US Private Client Group, Fisher Investments Private Client Group International, and Fisher Investments 401(k) Solutions Group. The Investment Policy Committee (IPC) is responsible for all investment decisions for the firm’s strategies. Data indicated above are based on engagement meetings for all of Fisher Investments Institutional clients. For Professional Client Use Only. Past performance is never a guarantee of future returns. Investments in securities involve the risk of loss. Any investment program will always involve the risk of loss. Global investing can involve additional risks, such as the risk of currency fluctuations.

As an asset management firm, Fisher Investments (FI) manages investments in shares of a wide range of companies on behalf of our clients. These shares entitle the holders to vote on various issues put forth by the company and its shareholders at the company’s annual meeting or at a special meeting.

The report above demonstrates how FI engages with company management on ESG issues: environmental issues include but not limited to: climate change, toxic emissions & waste, vulnerability to legislation and impact on local communities; social issues include but not limited to: animal rights, human rights, labor relations, controversial countries and controversial weapons and governance issues include but not limited to: routine business, corporate governance, board independence, executive compensation, corporate stewardship and bribery & corruption.

FI engages according to the Fisher Investments Engagement Policy. Identifying engagement opportunities is a part of FI’s fundamental analysis and to clarify or express concerns over potential ESG issues at the firm or industry level.

TABLE OF CONTENTS

ESG Implications of COVID-19 4

Global ESG Trends 11

Renewable Energy Opportunities 20

Limitations of ESG Scores 27

Appendix 34
ESG IMPLICATIONS OF COVID-19

• Demand for ESG strategies remains strong despite the bear market and global pandemic.

• COVID-19 brings socially focused issues to the forefront.

• Fund flows for socially and environmentally focused funds see continued growth.

• Performance tied to ESG scores during the pandemic appears to be more a factor of industry, style and size trends.
ESG DEMAND STRONG DESPITE BEAR MARKET

Compared to previous periods, US sustainable funds are enjoying record net inflows. YTD net inflows to US sustainable funds nearly doubled compared to the same period in 2019.

Monthly Net Inflows for US Sustainable Funds* (Billions, USD)

Net inflows to US sustainable funds has more than doubled compared to this time last year.

Source: Morningstar Direct as of 07/31/2020. Shows net inflows aggregated from all fund share classes included in the following Morningstar Sustainable Investment criteria’s, and available for sale in the United States. *Sustainable Investment Criteria’s included: Community development, Environmental, ESG Incorporation, Gender & Diversity, General Environmental Sector, Low Carbon/Fossil Fuel Free, Other Impact Themes, Renewable Energy & Water-Focused. (330 funds total).
SOCIALLY FOCUSED FUNDS LIKELY WILL SEE A BOOST IN DEMAND

The public health crisis is bringing the social component of ESG to the forefront. Relative to this time last year Socially focused funds have grown 19% globally.

Monthly Net Inflows for Socially Focused Funds (Billions, USD)

Source: Morningstar Direct, as of 05/22/2020. Shows cumulative net inflows for open-end and exchange traded funds in billions of USD, from 04/30/2010 to 04/30/2020. Social funds are based on the aggregate flows for the Community Development and Gender & Diversity Morningstar Sustainable Investment criteria’s. Based on 2,373 active and passive products.
“E” AND “S” COME TOGETHER

Net flows into environmental, social and impact funds remain positive despite the current market environment. Moving forward we expect to see continued demand for both E and S focused funds. Impact Investing—which incorporates both E and S considerations—is one of the fastest growing types of ESG investing globally.

Source: Morningstar Direct, as of 05/22/2020. Shows cumulative net inflows for open-end and exchange traded funds in billions of USD, from 04/30/2010 to 04/30/2020. Based on the Morningstar sustainable investment criteria’s as shown on chart. Social funds are based on the aggregate flows for the Community Development and Gender & Diversity Morningstar Sustainable Investment criteria’s. Based on 2,373 active and passive products. Based on 11,704 active and passive products.
WHEN A PASSIVE ESG INDEX OUTPERFORMS INVESTORS SHOULD BE SURE TO ASK WHY

Much is made of passive ESG indexes outperforming YTD, however decomposing returns suggests outperformance may have little to do with ESG strategy performance.

Performance of High Scoring ESG Equities in the US has been Inconsistent

Source: Fisher Investments/FactSet: Price performance Xtrackers MSCI USA ESG Leaders Equity ETF vs MSCI USA Index 12/31/2019 to 04/30/2020.
Security attribution suggests that YTD performance has more to do with the global pandemic than ESG scores. MSFT and NVDA had strong IT performance, driven by their ability to adapt to remote working conditions more easily than companies in other industries.

Source: Fisher Investments/FactSet: Total attribution effect (security + sector) of Xtrackers MSCI USA ESG Leaders Equity ETF vs MSCI USA Index 12/31/2019 to 04/30/2020.
ESG SCORE PERFORMANCE TIED TO QUALITY MARKET CYCLE

Returns of the top and bottom decile of ESG scores follow a similar pattern to quality: Low outperforms early in the cycle, while high outperforms later in the cycle.

Source: ClariFI and MSCI ESG Research; ESG scores are MSCI’s industry-adjusted ESG scores; 07/08/2016 marks the end of the middle third; returns are cumulative from 03/09/2009 to 03/31/2020; FactSet MSCI World Quality vs MSCI World (last 4 bull market cycles).
GLOBAL ESG TRENDS

• The market share of ESG strategies is growing globally across almost all major regions.

• By AUM, exclusions are the largest ESG strategy while Impact investing is one of the fastest growing.

• Regionally, Australia, New Zealand and Europe have the highest portion of AUM in ESG investments.

• Investors prefer actively managed ESG funds.

• The percentage of female board directors varies across countries with developed markets leading.

As of 06/30/2020.
Demand for ESG oriented products has grown dramatically over the last 7 years, illustrating the importance and value investors put behind considering ESG factors.

Growth Rate: 204%

Source: MSCI ESG Research as of 12/31/2019.
Globally, ESG AUM across the 5 major markets was $30.7 trillion at the start of 2018, a 34% increase in 2 years. In all the regions except Europe, ESG investing’s market share increased. From 2016 to 2018, Japan was the fastest growing region.

Negative screening has the highest ESG AUM globally, while sustainability themed was the fastest growing strategy, followed by positive screening and impact.

**ESG IN JAPAN**

Japan is the fastest growing region for ESG AUM.

From 2016 - 2018, Japanese ESG AUM grew over 300%.

Corporate engagement and shareholder action strategies are the top Japanese ESG approaches, followed by ESG integration.

**ESG Strategy AUM in Japan (Billions, USD)**

INVESTORS PREFER ACTIVELY MANAGED ESG
Since mid-2015, net inflows into active products considered as ESG Funds by Morningstar has been growing at much faster clip than passive products. Active leading is even more evident for socially focused funds.

Source: Morningstar Direct as of 05/20/2020. Cumulative net flows shown for 01/01/2015 to 04/30/2020. Top chart shows active and passive cumulative net inflows for all open-end funds & ETF's classified as satisfying the "ESG overall" sustainable investment criteria (17,649 products). Bottom chart shows active and passive cumulative net inflows for all open-end funds & ETF's classified as satisfying the "Gender & Diversity" and/or "Community Development" sustainable investment criteria (2,373 Products). As products may satisfy multiple criteria, some funds may be represented on both charts.
The percentage of board directors who are women varies across countries with developed markets leading at an average of 24%.

South African female board representation is in line with DM markets. On the other hand, the 8% Japanese female board participation rate is below the Emerging Market average of 12%.

Source: MSCI ESG Research, as of 12/31/2019.
RENEWABLE ENERGY OPPORTUNITIES

- EM companies tend to have higher carbon emission relative to DM with the majority of emissions concentrated in the utilities, materials and energy sector.

- Globally, wind and solar power generation is becoming cheaper than fossil fuels.

- Cloud services that are provided by technology companies support energy efficiency and renewable energy use.

- Divesting fully from carbon can create unintended style bias and missed opportunities from larger energy firms with renewable energy exposure.
UNDERSTANDING TOP-DOWN CARBON EXPOSURES

Historically, EM companies exhibit higher carbon emissions than DM.

The majority of carbon emissions are in the Utilities, Materials and Energy sectors.

Source: MSCI ESG Research, Factset Portfolio Analysis as of 05/31/2020.
WIND & SOLAR ENERGY IS BECOMING CHEAPER THAN COAL

Continuing technological innovations are making low carbon energy production the cheapest source of power in many major countries.

Fossil fuel production was the cheapest energy source in 2014. By 2019, technological advances from a higher number of renewable energy producers drives the economic viability of clean energy.

Source: MSCI ESG Research as of 05/31/2020.
TECH FIRMS ARE DRIVING CLEAN ENERGY GROWTH

The Information Technology sector derives the highest amount of revenue from environmental impact solutions—green buildings, energy efficiency, etc.—across global and US markets. Tech firms play a huge role in addressing climate change because many efficiencies gained in energy usage are driven by improvements in technology.

Source: MSCI ESG Research as of 05/31/2020.
CLOUD COMPUTING COMBATTING CLIMATE CHANGE

Cloud hyperscale data centers are almost twice as energy efficient as localized data centers. Cloud use growth is nearly double that of the IT sector’s carbon emissions growth.

Large Data Centers are More Efficient with their Power (PUE)

Cloud Penetration
(Cloud Services/Total Other Data Services)

IT Carbon Emissions

2017 – 2018 Annual Growth

Each of the four largest cloud service providers leads in renewable energy consumption. Microsoft and Google currently purchase enough renewable energy to match all of their electricity consumption. Amazon committed to 100% renewable use by 2025, and IBM is aiming for 55% renewable use by 2025.

Renewable Energy Use of Major Cloud Service Providers

Top left chart source: Lawrence Berkely National Laboratory, June 2016. Top right chart source: Gartner as of Q1 2020, MSCI ESG as of 06/30/2020. LIMITATIONS OF ESG SCORES

• Despite increases in company ESG data, over-reliance on ESG scores may lead to unintended portfolio risks.

• Larger companies from developed markets tend to have higher ESG scores.

• Restricting companies based on ESG scores can materially restrict the investable universe and cause industry, size and style bias.

• ESG scores have a limited history of data coverage across major indexes.

• ESG scores could be serve as a non-financial proxy for quality exposure.

As of 06/30/2020.
LARGER COMPANIES FROM DEVELOPED MARKETS TEND TO HAVE HIGHER ESG SCORES

Understanding high level Top-Down ESG trends prior to equity selection facilitates more rigorous ESG analysis.

Source: MSCI ESG Research, Factset Portfolio Analysis as of 12/31/2019.
ELIMINATING COMPANIES BASED ON ESG SCORES RESTRICTS THE INVESTABLE UNIVERSE

In DM and EM, the investable universe is materially restricted by eliminating companies based on ESG scores.

APPENDIX
DEFINING ENVIRONMENTAL, SOCIAL AND GOVERNANCE (ESG)

ESG investing encompasses one or multiple of the following approaches:

- **No ESG**
  - Solely focused on financial returns with no ESG considerations

- **Negative Screening**
  - Removal of equities violating predetermined threshold based on values and global norms

- **Positive Screening**
  - Investing in companies based on their positive ESG characteristics relative to industry peers

- **ESG Integration**
  - The systematic and explicit inclusion by investment managers of ESG factors into the investment process

- **Active Ownership**
  - Use of shareholder power to influence corporate behaviour

- **Thematic Investing**
  - The selection of assets specifically related to sustainability in single- or multi-themed funds (Solar Fund, Clean Water Fund etc.)

- **Impact Investing**
  - Investing with the intent to generate purposeful and measurable positive social and environmental impacts alongside financial returns

For Institutional Investors Only

Investing in financial markets involves the risk of loss and there is no guarantee that all or any capital invested will be repaid. Past performance neither guarantees nor reliably indicates future performance. Other methods may produce different results, and the results for individual portfolios and for different periods may vary depending on market conditions and the composition of the portfolio. The value of investments and the income from them will fluctuate with world financial markets and international currency exchange rates.

TOP-DOWN VERSUS BOTTOM-UP

Overwhelmingly, investment professionals today utilise an investment process generally known as “bottom-up” investing. A typical bottom-up investor emphasises equity selection and researches an assortment of companies, attempting to pick those with the greatest likelihood of outperforming the market based on individual merits. The investor mixes the selected securities together to form a portfolio; however, country and sector exposures are often simply residuals of security selection.

“Top-down” investing reverses this process. A top-down investor first analyses such macro factors as economics, politics and sentiment to forecast which investment categories are most likely to outperform the market. Only then does a top-down investor begin looking at individual securities. Top-down investing is inevitably more concerned with a portfolio’s exposure to broad investment categories than any individual security. Thus, top-down is an inherently dynamic mode of investing because investment strategies are based upon the prevailing market and economic environments (which change often).

TOP-DOWN IN AN ESG FRAMEWORK

Top-down research is highly complementary to ESG analysis. In a world of global supply chains and multinational corporations, implementing ESG considerations in the investment approach requires global insights. Over 48% of revenue of MSCI World constituents and 30% of revenue of MSCI EM constituents is derived from abroad (Exhibit 1).

Top-down investment management is all about considering factors (risks and opportunities) outside the scope of traditional financial statement analysis. This is also the main goal of ESG integration. For example, understanding the political/legislative/corporate norms of a country can help avoid environmental or regulatory risks securities in any given country may be exposed to. To summarise: Good top-down decisions already demand ESG considerations.

While ESG factors are of significant importance, in this paper, we will focus exclusively on the added value of analyzing governance considerations through a top-down lens.

EXHIBIT 1: REVENUE DERIVED FROM ABROAD BY COUNTRY

% Revenue derived abroad

Source: FactSet as of 18/05/2020.
THE PITFALLS OF QUANTITATIVE GOVERNANCE SCREENING
One common approach in 'best in class' ESG strategies is for managers to quantitatively screen out low-rated companies by total score or by individual pillar scores (E,S,G). While applying a common risk framework (ESG score screening) may be appropriate for environmental and social considerations, it is inappropriate for governance review.

NO SHORTCUTS TO SECURITY-LEVEL GOVERNANCE ANALYSIS
Broad common externalities (e.g. carbon regulation, consumer preferences) primarily drive environmental and social risk. A common risk framework (ESG score screening) thus may reasonably help managers assess security-level environmental/social risks. However, while key governance-related externalities need to be considered (e.g. government influence, country reforms), internalities unique to an individual company's structure, management team and business/industry primarily drive security-level governance risks. In analyzing governance risks, therefore, a common risk framework like ESG score screening may not sufficiently help managers.

CORPORATE GOVERNANCE ANALYSIS INTEGRATION
Instead of applying a one-size-fits-all common framework for governance analysis, Fisher Investments evaluates governance factors at multiple stages throughout the investment process. It does this at both the top-down level (with Capital Markets Analysts and the Investment Policy Committee developing country, sector and thematic preferences) and at the bottom-up/security-level (with Securities Analysts conducting fundamental analysis and engagements.)

TOP-DOWN GOVERNANCE PROCESS
In a top-down investment process, sector, country, style and thematic decisions contribute materially to relative performance. As such, identifying factors likely to contribute positively or negatively to country/sector performance requires significant effort. At the country level, for example, governance analysis primarily includes the degree to which a country's political/regulatory structure and trends (e.g. reforms) may influence business results or investor preference for that country relative to alternatives. Top-down governance factors considered when determining country and sector/industry allocation include governmental influence on public companies, regulation, social policy, and market reforms impacting private property, labour or corruption.

BOTTOM-UP GOVERNANCE PROCESS
FI's Securities Analysts perform fundamental research on prospective investments to identify securities with strategic attributes most consistent with the firm's top-down views and with competitive advantages relative to their defined peer group. Governance analysis at the security level involves assessing a company's risks (e.g. ownership concentration, share class structure, proxy fights) and its ability to mitigate such risks (e.g. through board structure, independent auditor activities or managerial quality assessment). When security-level concerns present an inordinate risk to a company's operational or financial performance, or the firm believes they present undue headline risk to share price performance, FI would choose not to invest in that company.

Engagement and proxy voting are also important parts of FI's governance analysis. FI engages with companies as part of its fundamental analysis and to clarify or express concerns over potential governance issues. FI also interacts with company management on proxy voting issues, particularly when our proxy voting services provider, Institutional Shareholder Services, Inc. (ISS), disagrees with company management. FI’s broader Engagement Policy is available upon request.

The importance of independent and detailed governance analysis cannot be overstated. As discussed, there are no shortcuts to governance risk assessment, as internalities unique to an individual company's structure, management team and business/industry primarily drive security-level risks. Using a quantitative screening approach relying on third-party (e.g. MSCI ESG Research, Sustainalytics, ISS, etc.) could lead to individual missed opportunities or a restriction of large swaths of the investment universe, such as Chinese ADRs using the Variable Interest Entity (VIE) structure.
Some of the most important decisions for top-down managers occur on the country and sector level. Top-down governance analysis can help isolate countries and sectors that are poised to underperform—pulled down by negative ESG characteristics. Following are several examples describing how country-level corporate governance can be one of several factors potentially impacting performance.

RUSSIAN CORRUPTION
Country-level corporate governance is one of many factors that help us determine the gap between reality and expectations and expected risks in the portfolio. We hold no bias in favour or against any specific country, but we consider top-down governance considerations particularly important in Emerging Market countries like Russia—where there are less-rigorous mechanisms to prevent public and private sector corruption.

Japan has a history of nationalisations that raise concerns over property rights, such as the one conducted on energy company Yukos. The CEO was arrested, the company was forcibly broken up and pushed into bankruptcy for unpaid taxes. International courts ruled that the government abused their power to illegally seize the company’s assets.

Although there was a high concentration of Energy companies in Russia from 2006 – 2012 and we remained overweight to the sector in our EM strategies, high-level ESG considerations led us to seek Energy exposure in other areas with significantly less political risk (Exhibit 2).

EXHIBIT 2: ACTIVE EXPOSURE TO ENERGY AND RUSSIA OVER TIME

Despite being overweight to Energy from 2006-2012......

...we maintained an underweight to Russia in part to reduce political governance risk

Source: Fisher Investments Emerging Markets active weights to Energy and Russia relative to MSCI Emerging Markets. Barra Portfolio Manager from 01/04/2006-31/03/2012.
SOUTH AFRICAN REFORMS
Another country-level governance analysis example involves South Africa. This analysis heavily influenced the Investment Policy Committee’s (IPC’s) decision-making within Fisher Investments’ Institutional Emerging Markets Equity Fund. Specifically, it led to the IPC’s decision to underweight South Africa vs. the MSCI Emerging Markets Index.

Proposed Land Reform: South African President Cyril Ramaphosa’s government has been progressing reform that would expropriate land without compensating current owners. While the goal of this reform, much like prior Black Economic Empowerment programmes, is to improve income and wealth disparity, it does weaken the strong property ownership rights that separate South Africa from other African nations and increases the risk of discouraging foreign direct investment. Additionally, Black Economic Empowerment programmes have been criticised for benefitting only a small portion of the Black population and widening the wealth gap within that demographic. This has a negative impact on the Financial, Real Estate and Materials sectors.

Government Corruption and State Capture: Former President Jacob Zuma is currently facing prosecution for arms deals he facilitated as deputy president and could face additional bribery and state capture charges tied to the Gupta family scandal. While Zuma is out of office, his African National Congress remains in power, and some of his peers and state-owned enterprises could potentially be involved in the scandals. This has a negative impact on the Utilities and Financial sectors. Overall, perceived corruption has not been improving in recent years and remains worse than the average of MSCI EM countries, as measured by Transparency International (Exhibit 3).

Further, South African government officials have recently floated proposals to force banks to lend to coal-fired utilities and invest in new coal-fired power plants against their will. This has contributed to underperformance for the banking industry.

EXHIBIT 3: SOUTH AFRICAN CORRUPTION NOT IMPROVING
South African Corruption Perceptions Index - Relative to Average Emerging Markets Country Index

Less Perceived Corruption

Source: Transparency International as of 31/12/2019.
BRAZILIAN CORRUPTION

Corporate corruption concerns are most often focused on scandals (e.g. Operation Car Wash in Brazil, South Korean President Park Geun-hye’s impeachment) that have caused passive ESG investors to persistently underweight entire countries. Such simple risk-avoidance strategies lead investors to miss out on alpha opportunities that top-down macro managers such as FI don’t overlook.

A strategy that simply screens out lower-rated companies could likely exclude an entire country or create a chronic underweight position to areas like Brazil, one of the nations with the worst Bribery and Corruption scores (per MSCI ESG Research). As a top-down manager, Fisher Investments acknowledges the risks in Brazil, but also balances them with the alpha opportunity depressed equity sentiment and fundamental economic tailwinds bring.

Furthermore, by simplistically avoiding Brazil due to fears of corporate corruption, investors also overlook the positive impact produced through the Brazilian banking system. Brazilian banks have a history of lending to low and middle class individuals, helping drive increased credit penetration for the country.

Companies such as Banco Bradesco have used unique approaches, such as riverboats, in order to bring banking to underserved regions of the country.

Such investments support UN Sustainable Development Goal #1—“No Poverty”. One way for investors to reduce poverty is through investment in banks that provide credit to underserved communities. Investing in Brazilian banks—despite corruption fears—can help achieve that aim.

CORPORATE GOVERNANCE IN JAPAN

Japan currently has the worst corporate governance score (as defined by MSCI ESG Research) of all countries in the MSCI World index. Part of this is due to a lack of independent board members. Often times there are close relationships between big Japanese banks and large corporations. As a result, corporate board members were and still are often insiders coming from a main bank, the corporate group and the corporation itself. Additionally, the country ranks last of all developed countries as it relates to board diversity, with women making up only 9% of the boards of Japanese public companies (Exhibit 4).

However, the Abe administration aims to improve corporate governance and raise ROEs through the creation of equity indices comprised of strong corporate governance firms—aimed to attract government and private capital. Further, the $1.5T government pension fund (GPIF) is allocating funds to encourage better governance standards, female labour force participation and carbon reduction. Many medium and large size Japanese firms are modifying organisational practices as a result of the GPIF emphasis.

HISTORY OF CORPORATE STEWARDSHIP AT FISHER INVESTMENTS

Demand for ESG oriented strategies has grown consistently over the last 50 years, illustrating the importance and value investors put behind considering ESG factors (Exhibit 5). While other managers have rushed to incorporate ESG into their investment strategies, FI has decades of experience actively managing portfolios considering government corruption, environmental legislation, labour developments, human rights and other macro ESG considerations. Each year our ESG program continues to expand and develop, and we are excited to continue building out our ESG capabilities.

CURRENT ESG ORGANISATION MEMBERSHIPS

We are a United Nations Principal for Responsible Investment Signatory, support the U.K. Stewardship Code and are a signatory of the Japanese Stewardship Code. Further, FI is a member of the following organisations.

- **UN Global Compact Participant**: The UN Global Compact is a voluntary initiative based on company commitments to implement universal sustainability principles and to undertake partnerships in support of UN goals.
- **CDP Signatory**: CDP runs the global environmental disclosure system. Each year CDP supports thousands of companies, cities, states and regions to measure and manage their risks and opportunities on climate change, water security and deforestation.
- **Climate Action 100 Signatory**: Climate Action 100 is an investor initiative to ensure the world’s largest corporate greenhouse gas emitters take action on climate change. The companies include 100 ‘systemically important emitters’, accounting for two-thirds of annual global industrial emissions, in addition to 60 companies with high opportunity to promote clean energy.
- **Task Force on Climate-related Financial Disclosure (TCFD) Supporter**: The FSB TCFD creates voluntary, consistent climate-related financial risk disclosures for firms to provide for investors, lenders, insurers, and other stakeholders.
- **Conservation International Supporter and Emerald Circle Member**: Conservation International works to highlight the critical opportunities that nature provides to humanity. They work to protect more than 2.3 million square miles of land and sea across 70+ countries.

DISCLOSURES

Fisher Investments Europe Limited (FIE) is authorised and regulated by the Financial Conduct Authority. It is registered in England, Company Number 3850593. FIE is wholly-owned by Fisher Asset Management, LLC, trading as Fisher Investments (FI), which is wholly-owned by Fisher Investments, Inc.

Fisher Investments (FI) is an investment adviser registered with the securities and Exchange Commission. As of 31 December 2019, FI managed over $120 billion, including assets sub-managed for its wholly-owned subsidiaries. FI and its subsidiaries maintain four principal business units – Fisher Investments Institutional Group (FIIG), Fisher Investments Private Client Group (FIPCG), Fisher Investments International (FII), and Fisher Investments 401(k) Solutions Group (401(k) Solutions). These groups serve a global client base of diverse investors including corporations, public and multi-employer pension funds, foundations and endowments, insurance companies, healthcare organisations, governments and high-net-worth individuals. FI’s Investment Policy Committee (IPC) is responsible for investment decisions for all investment strategies.

For purposes of defining “years with Fisher Investments,” FI was established as a sole proprietorship in 1979, incorporated in 1986, registered with the US SEC in 1987, replacing the prior registration of the sole proprietorship, and succeeded its investment adviser registration to a limited liability company in 2005. “Years with Fisher Investments” is calculated using the date on which FI was established as a sole proprietorship through 31 December 2019.

FI is wholly owned by Fisher Investments, Inc. Since Inception, Fisher Investments, Inc. has been 100% Fisher-family and employee owned, currently Fisher Investments Inc. beneficially owns 100% of Fisher investments (FI), as listed in Schedule A to FI’s form ADV Part 1. Ken and Sherrilyn Fisher, as co-trustees of their family trust, beneficially own more than 75% of Fisher Investments, Inc., as noted in Schedule B to FI’s Form ADV Part 1.

FIE delegates portfolio management to FI. FI’s Investment Policy Committee is responsible for all strategic investment decisions. FIE’s Investment Oversight Committee (IOC) is responsible for overseeing FI’s management of portfolios that have been delegated to FI. Matters arising pursuant to FI’s portfolio management policies are elevated to the IOC.

PRESENTATION AGENDA

- PERFORMANCE
  Presented by Seth Groener, Senior Research Analyst, Portfolio Management Group

- ENGAGEMENT
  Presented by Anita Green, Vice President of Investor Responsibility & Engagement

- TOP-DOWN
  Presented by Zoe Abbott Boyd, ESG Program Manager
• Don’t read too much into passive ESG performance in 2020 COVID–19 downturn

Seth generates fundamental and quantitative macroeconomic research for use in the investment process. Seth is also an ESG specialist on the Capital Markets Research team and a member of the firm’s Responsible Investments Committee. He impacts the application of ESG considerations in several different areas of our process: investment research, guideline implementation, training and compliance.
WHEN A PASSIVE ESG INDEX OUTPERFORMS INVESTORS SHOULD BE SURE TO ASK WHY

Much is made of passive ESG indexes outperforming YTD, however decomposing returns suggests outperformance may have little to do with ESG performance.

Performance of high scoring ESG stocks in the US has been inconsistent

Security attribution suggests that YTD performance has more to do with the global pandemic than ESG scores

ESG RISK SCORES OFTEN CORRELATE TO STANDARD INVESTMENT STYLE FACTORS

ESG performance may be a residual of style trends as high rated stocks outperform with growth or quality.

**Top chart:** Fisher Investments, FactSet, MSCI ESG Research. Weight to ratings groups as of 3/31/2020.

**Bottom chart:** Source: Clarifi and MSCI ESG Research; ESG scores are MSCI’s industry-adjusted ESG scores; 7/8/2016 marks the end of the middle third; returns are cumulative from 3/9/2009 to 3/31/2020; FactSet MSCI World Quality vs MSCI World (last 4 bull market cycles).

High scoring ESG stocks tend to outperform low scoring stocks when high quality outperforms low quality.
What are the evolving engagement themes of the global health crisis?

Anita Green – Vice President of Investor Responsibility & Engagement

Anita leads the strategic development and implementation of the corporate engagement program. Her team engages companies in dialogue on relevant environmental, social and governance issues, often seeking additional disclosure to investors or requesting companies take steps to strengthen their performance. Anita has more than 20 years’ experience in corporate engagement and is a member of the firm’s Responsible Investment Committee.
ENGAGEMENT THEME: PARIS CLIMATE AGREEMENT
Can temporary global emissions reductions hasten the transition to a low-carbon economy?

• At the 2015 United Nations Framework Convention on Climate Change, 196 countries agreed to take steps to limit global warming to no more than 2 °C, with an ambition of achieving 1.5°C. The countries also agreed to revisit and enhance progress every 5 years.

• At the 2020 Convention, parties were expected to communicate new or updated commitments. Due to COVID-19, it is postponed until next year.
ESG: HIGHLIGHTING THE “S” AND “G”

• SOCIAL
  • Income inequality
  • Human capital management

Job losses disproportionately affect low-income workers. Reducing wages and benefits without reducing financial obligations widens the income gap.

• GOVERNANCE
  • Resilience to external threats
  • Executive compensation

Investors are scrutinizing companies’ preparedness for significant threats. This includes board oversight, operational liquidity and executive pay that aligns with performance.
FROM SHAREHOLDER TO STAKEHOLDER—REDEFINING THE PURPOSE OF A CORPORATION

• “Business Roundtable”– US Trade Association
  • August 2019 *Statement on the Purpose of a Corporation* moves away from shareholder primacy toward a stakeholder approach

• EU Shareholder Rights Directive II
  • States that decisions should be made for long-term company stability

• United Nations Sustainable Development Goals
  • Global challenges are interconnected, focuses on “leaving no one behind.”
Global Pandemic derailed the longest running bull market but has not slowed ESG demand.

Zoe leads our ESG program and manages the 25 member Responsible Investment Committee. Additionally, Zoe is a member of the firms Diversity & Inclusion taskforce which works to make Fisher a leader in this space. In her previous role, she spearheaded the creation of the department’s ESG reporting: UN Sustainable Development Goals in Impact Investing, Carbon Footprint and researched the limitations of ESG scores.
ESG DEMAND STRONG DESPITE BEAR MARKET

Compared to previous periods, US sustainable funds are enjoying record net inflows. YTD net inflows to US sustainable funds nearly doubled compared to the same period in 2019.

Source: Morningstar Direct as of 04/30/2020. Shows net inflows aggregated from all fund share classes included in the following Morningstar Sustainable Investment criteria's, and available for sale in the United States. *Sustainable Investment Criteria’s included: Community development, Environmental, ESG Incorporation, Gender & Diversity, General Environmental Sector, Low Carbon/Fossil Fuel Free, Other Impact Themes, Renewable Energy & Water-Focused. (312 funds total).
SOCIALY FOCUSED FUNDS LIKELY WILL SEE A BOOST IN DEMAND

The public health crisis is bringing the social component of ESG to the forefront. Relative to this time last year Socially focused funds have grown 19%.

Source: Morningstar Direct, as of 05/22/2020. Shows cumulative net inflows for open-end and exchange traded funds in billions of USD, from 04/30/2010 to 04/30/2020. Social funds are based on the aggregate flows for the Community Development and Gender & Diversity Morningstar Sustainable Investment criteria’s. Based on 2,373 active and passive products.
While E and G factors can mainly be understood through measurable quantitative factors, company social factors are often estimated. The vast majority of S scores attempt to assign materiality to internal factors—company policies, disclosures, number of trainings etc.—which can vary widely dependent on firm size and region standards for example, EM vs. DM.

SOCIAL DATA IS LIMITED

INVESTORS PREFER ACTIVELY MANAGED ESG

Likely due to the nuance and data limitations of ESG scores, since mid-2015, net inflows into active products considered as ESG Funds by Morningstar has been growing at much faster clip than passive products. Active leading is even more evident for socially focused funds.

Source: Morningstar Direct as of 05/20/2020. Cumulative net flows shown for 01/01/2015 to 04/30/2020. Top chart shows active and passive cumulative net inflows for all open-end funds & ETF’s classified as satisfying the “ESG overall” sustainable investment criteria (17,649 products). Bottom chart shows active and passive cumulative net inflows for all open-end funds & ETF’s classified as satisfying the “Gender & Diversity” and/or “Community Development” sustainable investment criteria (2,373 Products) As products may satisfy multiple criterias, some funds may be represented on both charts.
WHAT HAPPENS TO THE CLIMATE AGENDA IN AN ERA OF INCREASING SOCIAL FOCUS?

Local signs put up in Portland Oregon during March 2020.

Fight Covid-19

Also, Climate Change
“E” AND “S” COME TOGETHER

Net flows into environmental, social and impact funds remain positive despite the current market environment. Moving forward we expect to see continued demand for both E and S focused funds. Impact Investing—which incorporates both E and S considerations—is one of the fastest growing types of ESG investing globally.

Social Funds have seen ~7bn USD of net inflows YTD to April

Source: Morningstar Direct, as of 05/22/2020. Shows cumulative net inflows for open-end and exchange traded funds in billions of USD, from 04/30/2010 to 04/30/2020. Based on the Morningstar sustainable investment criteria’s as shown on chart. Social funds are based on the aggregate flows for the Community Development and Gender & Diversity Morningstar Sustainable Investment criteria’s. Based on 2,373 active and passive products. Based on 11,704 active and passive products.
SUMMARY

- Don’t read too much into passive ESG performance in 2020 COVID-19 downturn
  - ESG matters, ESG scoring isn’t always a good reflection of what matters

- What Are the Evolving Engagement Themes of the Global Health Crisis?
  - Trends toward recognizing corporations’ broader role in society is gaining support, leading to ESG related engagement opportunities

- Global Pandemic derailed the longest running bull market but has not slowed ESG demand
  - Following the public health crisis, investors continue to seek active ESG funds with social and environmental focuses
FISHER INVESTMENTS
AN OVERVIEW

EXPERIENCED
• Founded by Ken Fisher in 1979
• Over $98 billion in assets under management
• Over $29 billion in institutional assets under management
• UNPRI Signatory with experience managing ESG/SRI mandates for over 25 years (since 1989). As of March 31 2020, FI managed assets valued at over $13.2 billion for 53 ESG/SRI mandates across all of the firm’s strategies: Emerging Markets Equity, Global Developed Equity, Non-US Equity, and US Equity.

GLOBAL
• Global research platform
• 3000+ employees across global offices in Australia, Dubai, Germany, Luxembourg, Ireland, Japan, US and UK

FOCUSED
• Asset management is our primary business

INDEPENDENT
• 100% Fisher employee and family-owned
• Aligns the interests of our employees with our clients
• Helps retain key employees

STABLE
• Firm culture emphasizes employees building careers by building breadth and depth across the firm and promoting from within

As of 3/31/2020.
FIRM

Fisher Investments (FI) is an investment adviser registered with the Securities and Exchange Commission. As of March 31, 2020, FI managed over $98 billion, including assets sub-managed for its wholly-owned subsidiaries. FI and its subsidiaries maintain four principal business units – Fisher Investments Institutional Group (FIIG), Fisher Investments Private Client Group (FIPCG), Fisher Investments International (FII), and Fisher Investments 401(k) Solutions Group (401(k) Solutions). These groups serve a global client base of diverse investors including corporations, public and multi-employer pension funds, foundations and endowments, insurance companies, healthcare organizations, governments and high-net-worth individuals. FI's Investment Policy Committee (IPC) is responsible for investment decisions for all investment strategies.

For purpose of defining “years with Fisher Investments,” FI was established as a sole proprietorship in 1979, incorporated in 1986, registered with the US SEC in 1987, replacing the prior registration of the sole proprietorship, and succeeded its investment adviser registration to a limited liability in 2005. “Years with Fisher Investments” is calculated using the date on which FI was established as a sole proprietorship through March 31, 2020.

FI is wholly owned by Fisher Investments, Inc. Since Inception, Fisher Investments, Inc. has been 100% Fisher-family and employee owned; currently Fisher Investments Inc. beneficially owns 100% of Fisher Investments (FI), as listed in Schedule A to FI’s Form ADV Part 1. Ken and Sherrilyn Fisher, as co-trustees of their family trust, beneficially own more than 75% of Fisher Investments, Inc., as noted in Schedule B to FI’s Form ADV Part 1.

In investing in financial markets involves the risk of loss and there is no guarantee that all or any capital invested will be repaid. Past performance neither guarantees nor reliably indicates future performance. Other methods may produce different results, and the results for individual portfolios and for different periods may vary depending on market conditions and the composition of the portfolio. The value of investments and the income from them will fluctuate with world financial markets and international currency exchange rates.

The information in this document constitutes the general views of Fisher Investments and should not be regarded as personalized investment advice or a reflection of the performance of Fisher Investments or its clients. We provide our general comments to you based on information we believe to be reliable. There can be no assurances that we will continue to hold this view; and we may change our views at any time based on new information, analysis or reconsideration. Some of the information we have produced for you may have been obtained from a third party source that is not affiliated with Fisher Investments. Fisher Investments requests that this information be used for your confidential and professional use. Data is month end and USD unless stated otherwise.
Incorporating carbon considerations as part of an overall investment process has been led by large European institutional investors, but is fast becoming more popular. As shown in Exhibit 1, demand for low carbon products has grown dramatically over the last 40 years, illustrating the importance investors put behind carbon factors. Alongside traditional analysis of companies’ financial statements and corporate strategy, assessing emissions data, fossil fuel and clean technology exposure are among nonfinancial factors that investors are emphasizing.

**KEY POINTS:**

- Low carbon and fossil-fuel free strategies are growing in demand among institutional investors.
- Overly restrictive approaches to carbon divestments may limit opportunity set.
- Opportunities exist in low-carbon investments when viewed at the macro level.
- Fisher Investments (FI) strategically integrates low-carbon themes into investment process.

In particular, thermal coal (a type of carbon-based fuel that is burnt to generate electricity using steam turbines) has risen to be one of the most widely criticized carbon-based asset as it is the largest single source of global carbon emissions. Altogether, the combustion of thermal coal accounts for 40% of the total man-made CO2 emissions and 29% of the total manmade greenhouse gas emissions. As a result, many investors agree that focusing on thermal coal is the most effective low-carbon investment opportunity.

FI is cognizant of potential effects of transitioning to a lower-carbon economy and views climate change as a long-term consideration with the potential to impact equity markets primarily through legislative action and innovative energy efficient solutions. In making investment decisions we are also willing to partner with our clients to accommodate specific carbon mandates (see page 6 for more information).

\[\text{Source: International Energy Agency, as of March 2019.}\]
OVERLY RESTRICTIVE APPROACHES TO CARBON DIVESTMENTS MAY LIMIT OPPORTUNITY SET

For institutional investors that are facing the possibility or necessity to divest from carbon, there are multiple approaches. Investors may construct their divestment strategy by answering the following questions:

1. **What type of carbon-based fuel should be excluded?**
   - Thermal coal
   - Oil
   - Natural gas
   - Biofuels

2. **Which metrics should be used?**
   Examples:
   - Revenue derived
   - Power generated
   - MSCI environmental rating
   - Reserves ownership

3. **What threshold level should be set?**
   Examples:
   - Divest companies with ≥60% of power generated or revenue derived (Exhibit 2)
   - Divest companies with BBB rating or above
   - Divest companies with oil reserves

Depending on the answer to each of the above questions, various types of divestment strategies can be implemented – from restricting a small list of companies to a longer, more general list. The divestment parameters act as a lever influencing the number of constituents in the investable universe. Therefore, an investor should be mindful that an overly restrictive approach to divestment may limit opportunities. For example, divestment of companies that derived all of its revenue from carbon-based fuels will exclude large portions of the energy and utility companies. As a result, performance may also deviate substantially from the benchmark and lead to an increase in portfolio risk.

**FISHER INVESTMENTS’ DIVESTMENT APPROACH**

FI believes in constructing a carbon divestment strategy that restricts the worst offenders while offsetting portfolio risks. The following details how our research group constructed our divestment strategy:

1. **Type of carbon-based fuels: Thermal Coal**
   Like many investors, we also believe in excluding thermal coal because it produces the most CO2 emissions per unit of energy than any other fuels.

2. **Metrics: Power Generated or Revenue Derived**
   Our objective is to choose a metric that directly isolates thermal coal business activity. Initially, the ownership of thermal coal reserves metric seemed to be suitable. Many investors believe withdrawing financial capital from the suppliers means that thermal coal reserves would not be extracted for fuel. However, this metric is not comprehensive enough to identify companies with other business activities related to thermal coal such as exploration activities, midstream operations (transportation, storage, and wholesaling) and downstream operations (refining, processing, marketing and distribution).
Metrics continued...

We believe in restricting thermal coal based on power generated or revenue derived. Power generated captures companies that use thermal coal as a source of fuel, and revenue derived isolates companies with considerable income from selling thermal coal. In looking at these two metrics, we are able to restrict companies either by upstream or downstream activities.

3. Threshold level: More than 30%

Determining an appropriate restriction threshold is paramount as restrictions have varied affects across sectors. Sectors with business activities directly related to the carbon-based fuel industry like Energy, Utilities, Materials and Industrial have varying degrees of impact. For example, complete divestment from thermal coal restricts 75% of the Utilities sector in MSCI ACWI (Exhibit 3). In contrast, restriction at the 30% threshold only limits 34% of the Utilities sector.

Overall, we have chosen to set a 30% divestment threshold level. By eliminating companies with more than 30% power generated or revenue derived from mining thermal coal, the worst carbon offenders are restricted and reduces the total carbon emissions of the investable universe by a third.

This threshold level fulfills both a carbon divestment mandate and gives FI the flexibility to exercise our long-term investment decision process. Additionally, this approach is financially more practical in capturing a broader exposure to innovative and sustainable companies.

Exhibit 3: Varying Degrees of Impact to Sector Benchmark Holdings With Thermal Coal Power Generated or Revenue Derived Restrictions

"COMPLETE DIVESTMENT FROM THERMAL COAL RESTRICTS 75% OF THE UTILITIES SECTOR IN MSCI ACWI. IN CONTRAST, RESTRICTION AT THE 30% THRESHOLD ONLY LIMITS 34%"

Source: MSCI ESG Manager, data as of December 2019.
OPPORTUNITIES IN LOW-CARBON INVESTMENTS EXISTS WHEN VIEWED AT THE MACRO LEVEL

A top-down investment process relies on analysis of a wide range of economic, political and sentiment drivers to formulate forecasts and develop portfolio themes. Integrating carbon factors when analyzing global political drivers provides insight on securities that are at risk of facing potential political or regulatory actions surrounding carbon-related issues. Similarly, monitoring multinational agreements on carbon reduction and various countries de-emphasizing the use of coal in favor of cleaner energy sources allows asset managers to uncover low-carbon investment opportunities.

For example, China is known as the world’s largest polluter and uses coal as its primary source of electric power generation (Exhibit 4). However, in contrast, China is very aggressive in their goal to become more carbon-efficient as they recently increased its renewable energy production target to 35% by 2030. Currently, they are the world’s largest producer of electricity from renewable energy sources (Exhibit 5).

The Chinese government’s influence on its market create an opportunity for it to drive rapid low-carbon initiatives uptake by both investors and issuers. In recent years, Chinese equities have grown to become a major component of the renewable electricity industry in the MSCI EM index (Exhibit 6). By monitoring carbon factors from a top-down perspective, investors have an advantage in identifying key opportunities for low-carbon investments.

FISHER INVESTMENTS STRATEGICALLY INTEGRATES LOW-CARBON THEMES INTO INVESTMENT PROCESS

As investors look to move towards a low-carbon economy, one major concern regarding this transition is the impact that it could have on businesses and assets. With FI's flexible top-down investment process, we can easily accommodate for active carbon divestment (see page 2 for more information) and integration of low-carbon themes into our investment process without sacrificing overarching themes. Both direct and transitional carbon risks are incorporated within FI's investment process (Exhibit 7). For example, within all portfolios, we review the impact of climate-related legislation, shifting consumer preferences on country, sector, as well as security decisions.

Sources: Fisher Investments Research, as of December 2019.

Additionally, FI is able to measure the carbon emissions for individual portfolios and partner with our clients to accommodate specific carbon mandates. Currently, we offer ESG and low-carbon strategies that target a specified carbon divestment level. Within ESG portfolios, carbon-related risks are directly targeted by restricting various coal-fired utilities and mining companies involved in thermal coal extraction. Whereas within specific low carbon portfolios, FI explicitly targets a thermal coal reduction level relative to the respective strategy benchmark.

**SUMMARY**

Overall, FI believes climate change should be considered as part of managing both near and long term risks and for the purposes of identifying opportunities stemming from the global transition to a low carbon economy. As a result, we incorporate low-carbon themes within our organization and investment process. Our top down unique analysis of carbon serve as a source of excess return that are often overlooked by other investors.

Further, our research shows that the recommended threshold for managing thermal coal divestments is to apply a 30% threshold for thermal coal power generated or revenue derived. At this level, FI is able to focus on long-term results and seek to increase exposure to more carbon-efficient companies.

We believe our approach to low-carbon investments helps us seek to maximize the likelihood of achieving both objectives; desired performance and improving environmental and social conditions worldwide.
DISCLOSURES

Fisher Investments (FI) is an investment adviser registered with the Securities and Exchange Commission. As of 31 December 2019, FI managed over $115 billion, including assets sub-managed for its wholly-owned subsidiaries. FI and its subsidiaries maintain four principal business units – Fisher Investments Institutional Group (FIIG), Fisher Investments Private Client Group (FIPCG), Fisher Investments International (FII), and Fisher Investments 401(k) Solutions Group (401(k) Solutions). These groups serve a global client base of diverse investors including corporations, public and multiemployer pension funds, foundations and endowments, insurance companies, healthcare organizations, governments and high-net-worth individuals. FI’s Investment Policy Committee (IPC) is responsible for investment decisions for all investment strategies.

For purposes of defining “firm,” Fisher Investments was established as a sole proprietorship in 1979, incorporated in 1986, registered with the SEC in 1987, replacing the prior registration of the sole proprietorship, and succeeded its investment adviser registration to a limited liability company in 2005. “Years with FI” is calculated using the date on which Fisher Investments was established as a sole proprietorship through 31 December 2019.

FI is wholly-owned by Fisher Investments, Inc. Since inception, Fisher Investments, Inc. has been 100% Fisher-family and employee-owned. Fisher Investments, Inc. beneficially owns 100% of Fisher Investments (FI), as listed in Schedule A to FI’s Form ADV Part 1. Ken Fisher beneficially owns more than 75% of Fisher Investments, Inc., as noted in Schedule B to FI’s Form ADV Part 1.

FISHER INVESTMENTS TOP DOWN ESG
ASSESSMENT & MATERIALITY RATING: BRAZIL
TOP DOWN ESG ASSESSMENT: BRAZIL

Materiality Rating*: Low Medium High

With an economy leveraged to commoditized Energy, Materials & Agricultural products, Brazil remains materially exposed to risks related to the global transition to a low carbon economy. Further, a history of government corruption and international pressure from Amazonian deforestation remain as risks. Fundamentally, Brazilian economic growth may surprise to the upside as economic activity recovers globally post COVID-19 and as President Bolsonaro’s economic agenda provides a positive catalyst.

Key Top-Down Responsible Investments View:

Environmental:
- **Commodity Sensitivity:** Commodities (Energy, Materials, & Agriculture) account for 80% of Brazil’s exports**—driving a high correlation of Brazil market performance with commodity prices. Positively, commodities demand and EM Materials companies rebounded in 2019 and from COVID-19 lows.
- **Amazonian Deforestation:** Global pressure on Brazil’s government to ensure the safety of indigenous peoples and the protection of increasingly rampant deforestation grows. At its extreme, pressure from international investors and global brands may act as a material headwind.

Social:
- **Gender Inequality & Diversity:** Measures of Gender inequality (e.g. UNDP Gender Inequality Index) in Brazil are better than developing markets peers. However, female participation in national congress and in the board room remains low relative to developing market peers.
- **Extreme Poverty on the Rise:** Over the past two decades, Brazil made strides in reducing the % of population living in extreme poverty, however, since 2014 such trends have reversed (World Bank). Reforms espoused by Pres. Bolsonaro (eg. Labor/Pension Reform & privatization) run the risk of exacerbating income equality and increasing social discontent.

Governance:
- **History of Corruption:** Despite running on an anti-corruption platform, Pres. Bolsonaro is caught up in corruption allegations not unlike the accusations of bribery, electoral fraud and influence peddling that have plagued all administrations since the transition away from a military dictatorship in 1985.
- **Reform Hopes:** Pres. Bolsonaro has a lofty reform agenda to make Brazil more business-friendly and open up opportunities for outside investors. Proposals include the recently-passed pension reform, an overhaul and simplification of the tax system, privatization of state-owned companies and reducing the budget deficit.
- **State Ownership in Major Firms:** High relative ownership (and therefore influence) increased the general risks to international investors in some of Brazil’s largest companies such as State-owned PetroBras.

DISCLOSURES

FIRM

Fisher Investments (FI) is an investment adviser registered with the Securities and Exchange Commission. As of June 30, 2020, FI managed over $122 billion, including assets sub-managed for its wholly-owned subsidiaries. FI and its subsidiaries maintain four principal business units – Fisher Investments Institutional Group (FIIG), Fisher Investments Private Client Group (FIPCG), Fisher Investments International (FII), and Fisher Investments 401(k) Solutions Group (401(k) Solutions). These groups serve a global client base of diverse investors including corporations, public and multi-employer pension funds, foundations and endowments, insurance companies, healthcare organizations, governments and high-net-worth individuals. FI’s Investment Policy Committee (IPC) is responsible for investment decisions for all investment strategies.

For purpose of defining “years with Fisher Investments,” FI was established as a sole proprietorship in 1979, incorporated in 1986, registered with the US SEC in 1987, replacing the prior registration of the sole proprietorship, and succeeded its investment adviser registration to a limited liability in 2005. “Years with Fisher Investments” is calculated using the date on which FI was established as a sole proprietorship through June 30, 2020.

FI is wholly owned by Fisher Investments, Inc. Since Inception, Fisher Investments, Inc. has been 100% Fisher-family and employee owned, currently Fisher Investments Inc. beneficially owns 100% of Fisher Investments (FI), as listed in Schedule A to FI’s Form ADV Part 1. Ken and Sherrilyn Fisher, as co-trustees of their family trust, beneficially own more than 75% of Fisher Investments, Inc., as noted in Schedule B to FI’s Form ADV Part 1.

MATERIALITY RATING

The “Materiality Rating” indicates the relative degree to which cumulative ESG-related risks & opportunities are relevant to the active management & analysis of that particular sector/country/region. The assessment is determined both qualitatively & quantitatively by Fisher Investments Research.

The foregoing information constitutes the general views of Fisher Investments and should not be regarded as personalized investment advice or a reflection of the performance of Fisher Investments or its clients. Investment in securities involves the risk of loss. Past performance is no guarantee of future returns. Other methods may produce different results, and the results for different periods may vary depending on market conditions and the composition of a portfolio or index. If you have asked us to comment on a particular security then the information should not be considered a recommendation to purchase or sell the security for you or anyone else. We provide our general comments to you based on information we believe to be reliable. There can be no assurances that we will continue to hold this view; and we may change our views at any time based on new information, analysis or reconsideration. Some of the information we have produced for you may have been obtained from a third party source that is not affiliated with Fisher Investments. Fisher Investments does not provide tax advice and is not registered as a tax advisor. Fisher Investments requests that this information be used for your confidential and personal use. As of Q2 2020.
TOP DOWN ESG ASSESSMENT: INFO TECH

The Information Technology (IT) Sector is materially exposed to both Environmental & Social Responsible Investments trends and risks. While the sector faces potential headwinds related to shifting political influence and data privacy concerns, the sector is also well positioned to benefit from trends related to energy efficiency, renewable electricity production, and access to communications. Fundamentally, the sector is skewed toward large, high-quality firms and should benefit from robust global IT spending.

Top-Down Responsible Investments View:

Environmental:
- **Cloud Computing & Energy Efficiency Gains**: The on-going transition to cloud computing reduces energy consumption relative to traditional ‘on premises’ computing. Cloud computing reduces total cost burdens (including energy consumption) for businesses by allowing firms to more dynamically scale—turning costly upfront fixed costs into variable costs aligned with growth. This feature increases technology capacity utilization, reduces IT staffing needs and increasing workforce productivity.
- **Renewable Energy**: The IT sector, Solar/Semiconductors makers specifically, are well positioned to benefit from renewable electricity production trends. While the fundamental growth in solar electricity production is likely to remain robust, solar stocks face specific challenges related to large swings in sentiment, political and legislative changes, and price declines that pressure margins.

Social:
- **Data Security & Privacy Laws**: Shifting consumer preferences combined with political pressure may increase privacy requirements & privacy-related liabilities. Such preference shifts may be simultaneously tailwinds (creating new market opportunities for security related software companies) and headwinds (data breaches and regulatory/legislative scrutiny create increased liabilities) for the sector.
- **Enabling Social Improvement**: The IT sector stands to benefit broadly from trends that focus on improving the lives of underserved and developing nation populations globally. IT companies create the enabling technologies for a host of benefits of social good such as access to communications/online education, access to finance (cashless and mobile payments) and healthcare technology.

Governance:
- **Anti-Trust**: Pure Technology companies are among the least regulated leaving the sector at risk of increased regulation. Governments around the world may increasingly use anti-trust laws to reduce intellectual property royalties, as well as national security as a rationale to impede cross border M&A. Further, calls for Tech regulation in the US are increasing ranging from social media legal immunity, anti-competitive business practices and M&A investigations from regulatory bodies globally.

DISCLOSURES

FIRM

Fisher Investments (FI) is an investment adviser registered with the Securities and Exchange Commission. As of June 30, 2020, FI managed over $122 billion, including assets sub-managed for its wholly-owned subsidiaries. FI and its subsidiaries maintain four principal business units – Fisher Investments Institutional Group (FIIG), Fisher Investments Private Client Group (FIPCG), Fisher Investments International (FII), and Fisher Investments 401(k) Solutions Group (401(k) Solutions). These groups serve a global client base of diverse investors including corporations, public and multi-employer pension funds, foundations and endowments, insurance companies, healthcare organizations, governments and high-net-worth individuals. FI’s Investment Policy Committee (IPC) is responsible for investment decisions for all investment strategies.

For purpose of defining “years with Fisher Investments,” FI was established as a sole proprietorship in 1979, incorporated in 1986, registered with the US SEC in 1987, replacing the prior registration of the sole proprietorship, and succeeded its investment adviser registration to a limited liability in 2005. “Years with Fisher Investments” is calculated using the date on which FI was established as a sole proprietorship through June 30, 2020.

FI is wholly owned by Fisher Investments, Inc. Since Inception, Fisher Investments, Inc. has been 100% Fisher-family and employee owned, currently Fisher Investments Inc. beneficially owns 100% of Fisher Investments (FI), as listed in Schedule A to FI’s Form ADV Part 1. Ken and Sherrilyn Fisher, as co-trustees of their family trust, beneficially own more than 75% of Fisher Investments, Inc., as noted in Schedule B to FI’s Form ADV Part 1.

HOW DOES TOP-DOWN ESG INVESTING ADD VALUE?

HOW DOES AN ACTIVE TOP-DOWN APPROACH HANDLE THE NUANCES OF ESG INVESTING?

Despite popularity of environmental, social and governance (ESG) strategies, many investors struggle to understand how to incorporate ESG into investment processes. Should investors simply exclude “bad” ESG actors? Should they only buy the most environmentally and socially friendly companies? Perhaps buying the “bad ESG actors” and utilizing company ownership to actively engage on ESG issues is the optimal strategy?

Given the multitude of options for ESG investors, good intentions do not automatically prevent unintended portfolio risks. Excluding companies based on ESG scores alone can materially restrict the investable universe and can create unintended portfolio distortions relative to industry, size and style exposure. While environmentally conscious investors agree that climate change should be factored into portfolio considerations, the specifics of mitigating fossil fuel investment or capitalizing on clean energy opportunities remains debatable.

“Limited historical data, low correlations among ESG rating providers, and murky industry standards make rigorous passive ESG investing impractical.”

For example, removing high fossil fuel generating companies can give portfolios a growth bias (Exhibit 1).

EXHIBIT 1: PASSIVELY REMOVING FOSSIL FUELS MAY CREATE STYLE BIAS

EXHIBIT 2: SUPRISINGLY LOW CORRELATIONS AMONG ESG RATING PROVIDERS
Similarly, investors focusing exclusively on pure-play renewable energy firms miss environmental opportunities from exposure to large energy firms (Exhibit 3).

**EXHIBIT 3: AGAINST OIL ODDS – HOW INVESTING IN LARGE ENERGY COMPANIES FIGHTS CLIMATE CHANGE**

Active management is crucial to accurately navigate environmental and social portfolio risks and opportunities. Limited historical data, low correlations among ESG rating providers, and murky industry standards make rigorous passive ESG investing impractical.

We have decades of experience actively managing portfolios considering government corruption, environmental legislation, labor developments, human rights and other macro ESG considerations. Each year our ESG program continues to expand and develop, and we are excited to continue building out our ESG capabilities.

**EXHIBIT 4: EXAMPLES OF TOP-DOWN ESG INVESTMENT CONSIDERATIONS**

2019 marked a big year for ESG at Fisher Investments. This year, we launched our first impact portfolio—aligned with the UN Sustainable Development Goals, hired an industry expert on corporate engagement & responsibility, continued pushing data boundaries throughout our proprietary ESG research and started exploring ways to make our operations more sustainable.

INDUSTRY ESG STRATEGY GROWTH

As ESG mandates continue to gain popularity, ESG investing is becoming a key component of global capital markets. Demand for ESG oriented strategies has grown consistently over the last 50 years, illustrating the importance and value investors put behind considering ESG factors (Exhibit 5).

“ESG investing is becoming a key component of global capital markets.”

Top-Down managers and ESG conscious investors both analyze factors outside of the scope of traditional financial statement analysis. While other managers have rushed to incorporate ESG into their investment strategies, FI has been managing responsible investment portfolios for more than two decades and has always strived to incorporate ESG elements into our firm’s operations.

EXHIBIT 5: EVOLUTION OF ESG DEMAND

We are a United Nations Principal for Responsible Investment Signatory, support the U.K. Stewardship Code and are a signatory of the Japanese Stewardship Code.

CONTINUING EXPANSION OF ESG ORGANIZATION SUPPORT IN 2019

- **UN Global Compact Participant:** The UN Global Compact is a voluntary initiative based on company commitments to implement universal sustainability principles and to undertake partnerships in support of UN goals.
- **CDP Signatory:** CDP runs the global environmental disclosure system. Each year CDP supports thousands of companies, cities, states and regions to measure and manage their risks and opportunities on climate change, water security and deforestation.
- **Climate Action 100 Signatory:** Climate Action 100 is an investor initiative to ensure the world’s largest corporate greenhouse gas emitters take action on climate change. The companies include 100 ‘systemically important emitters’, accounting for two-thirds of annual global industrial emissions, in addition to 60 companies with high opportunity to promote clean energy.
- **Task Force on Climate-related Financial Disclosure (TCFD) Supporter:** The FSB TCFD creates voluntary, consistent climate-related financial risk disclosures for firms to provide for investors, lenders, insurers, and other stakeholders.
- **Conservation International Supporter and Emerald Circle Member:** Conservation International works to highlight the critical opportunities that nature provides to humanity. They work to protect more than 2.3 million square miles of land and sea across 70+ countries.

Source: Morningstar Direct. As of December 2019. Based on 5,537 observations. Fisher’s SRI strategy was US Small Cap Capabilities ESG and was seeded February 1995.
HOW DO WE DRIVE MEANINGFUL CORPORATE ENGAGEMENT?

Anita Green  
Vice President of Investor Responsibility and Engagement

WHAT IS ESG CORPORATE ENGAGEMENT AND HOW DOES IT DRIVE VALUE?
Simply put, it involves having conversations with corporate management or a board of directors about specific ESG issues. Through these conversations we assess the company’s level of awareness, discover potential impact to its business (is it a risk or an opportunity?), and determine if the company is on track to achieve previously set targets. Ultimately the purpose of corporate engagement is to create and retain shareholder value by focusing attention on significant business issues that reside outside of the company’s financial statements.

ESG corporate engagement is responsive to shareholders while facilitating frank discussions of investor expectations and providing feedback on specific ESG policies and practices. While ESG scores—such as those provided by MSCI or Sustainalytics—enable comparative analysis of corporate performance in each of the major categories, engagement allows us to do a deeper dive on corporate strategy and create a valuable source of qualitative information to incorporate into our investment process.

“Ultimately the purpose of corporate engagement is to create and retain shareholder value by focusing attention on significant business issues that reside outside of the company's financial statements.”

ESG corporate engagement is responsive to shareholders while facilitating frank discussions of investor expectations and providing feedback on specific ESG policies and practices. While ESG scores—such as those provided by MSCI or Sustainalytics—enable comparative analysis of corporate performance in each of the major categories, engagement allows us to do a deeper dive on corporate strategy and create a valuable source of qualitative information to incorporate into our investment process.

FI has conducted engagement for several years now and we look forward to enhancing this element of our ESG program. This includes:

- Developing engagement plans for priority ESG issues that align with FI’s top-down investment themes
- Expanding our engagement practices to collaboratively engage with other investors
- Improving systems for tracking and recording engagement activities and outcomes
- Strengthening communication of engagement themes and outcomes

At Fisher, ESG corporate engagement complements our top-down investment process and strengthens our understanding of how the companies we invest in address significant business issues. We are excited to expand this element of our ESG investment program.

ESG issues vary based on the sector or company, but common themes include:

<table>

WHAT IS THE OPTIMAL PROCESS FOR RESTRICTING FOSSIL FUELS?

KEY POINTS

- Low Carbon and fossil-fuel free strategies are growing in demand among institutional investors.
- Opportunities exist in low-carbon investments when viewed at the top-down level.
- Thermal coal accounts for almost half of all human-made CO2 emissions.\(^1\)
- Overly restrictive approaches to thermal coal divestments may unnecessarily limit investment opportunities.
- Restricting companies deriving more than 30% of their revenue from thermal coal removes the worst offenders while the ability to outperform over a market cycle remains intact.

Incorporating carbon footprint considerations as part of the investment process has been led by large European Institutional Investors, but is now becoming more popular globally. Alongside traditional analysis of companies’ financial statements and corporate strategy, assessing emissions data, fossil fuel exposure and clean technology exposure are now among the nonfinancial factors emphasized by investors. In particular, thermal coal (a type of fossil fuel that is burned for steam to run turbines that generate electricity) has risen to be one of the most widely criticized fossil fuel assets because it is the largest single source of global warming. The combustion of thermal coal accounts for 44% of the total manmade CO2 emissions and 29% of the total manmade greenhouse gas emissions.

For institutional investors that are facing the possibility or necessity to consider low-carbon investments, Fisher Investments (FI) recommends reducing emissions exposure from thermal coal due to its high CO2 content. While thermal coal seems to be most obvious fossil fuel of choice in reducing emissions, there are multiple ways to approach setting the thermal coal constraint. Should investors use revenue? Power generation data? Should thermal coal reserves ownership be considered in the analysis? It is also important to consider the assets and the timeframe for implementation.

“We found that restricting thermal coal based on power generation and revenue derived seems to be the most appropriate as it captures the impact of thermal coal from each dollar invested.”

In order to determine the appropriate thermal coal parameters, our research group ran multiple analyses on three major indexes testing the investment impact when applying varying levels of restrictions (Exhibit 1).

EXHIBIT 1: UNDERSTANDING THE IMPACT OF THERMAL COAL RESTRICTIONS

<table>
<thead>
<tr>
<th>% of MSCI ACWI Restricted</th>
<th>Complete divestment from thermal coal restricts about 4.5% of the universe...</th>
<th>... whereas restricting the worst offenders at 30% restricts less than 2%</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt;0%</td>
<td>4.4% 163 Firms</td>
<td>0% 55 Firms</td>
</tr>
<tr>
<td>&gt;30%</td>
<td>1.9% 86 Firms</td>
<td></td>
</tr>
<tr>
<td>&gt;60%</td>
<td></td>
<td>0.6% 55 Firms</td>
</tr>
</tbody>
</table>

We found that restricting thermal coal based on power generation and revenue derived seems to be the most appropriate as it captures the impact of thermal coal from each dollar invested. Further, FI believes choosing to divest at a targeted restriction level is financially more practical. It allows for flexibility to select carbon-efficient companies while reducing short-term...
risks. However, the impact of various threshold thermal coal restriction on benchmark holdings are not distributed evenly across sectors. In sectors like Energy, Utilities, Materials and Industrial, the impact varies considerably depending on how the thermal coal restrictions are implemented. For example, 100% divestment from thermal coal restricts approximately 76% of the Utilities sector in MSCI ACWI (Exhibit 2). In contrast, restriction at the 30% threshold only limits about 35% of the Utilities sector.

We recommend a 30% threshold for both thermal coal power generation and revenue derived. At this level, the worst offenders are restricted and short-term portfolio risks are limited. Additionally, this gives additional flexibility to exercise our long-term investment decision process and capture a broader exposure to innovative and sustainable companies.

Overall, the investment impact of carbon restrictions can vary considerably depending on how thermal coal restrictions are implemented. Coal divestment may affect only a few company holdings (30% threshold) or a substantial portion of a benchmark (0% threshold). Restricting companies deriving more than 30% of their revenue from thermal coal removes the worst offenders without sacrificing large portions of sector exposure.

EXHIBIT 2: STRICT CARBON RESTRICTIONS REMOVE UTILITIES FIRMS

We recommend a 30% threshold for both thermal coal power generation and revenue derived. At this level, the worst offenders are restricted and short-term portfolio risks are limited. Additionally, this gives additional flexibility to exercise our long-term investment decision process and capture a broader exposure to innovative and sustainable companies.

Overall, the investment impact of carbon restrictions can vary considerably depending on how thermal coal restrictions are implemented. Coal divestment may affect only a few company holdings (30% threshold) or a substantial portion of a benchmark (0% threshold). Restricting companies deriving more than 30% of their revenue from thermal coal removes the worst offenders without sacrificing large portions of sector exposure.

\[ \text{Source: International Energy Agency. As of March 2019.} \]
“Switching to plant-based meat alternatives could significantly reduce GHG emissions as well as society’s impact on water scarcity and thus partially alleviate climate change concerns.”

In contrast, lab-based meat takes live animal tissues and reproduces the cells in a tank with growth medium (a soup of nutrients that mimics an animal’s body). Not only does this method currently require significant amounts of energy, it is more detrimental to the climate than traditional meat, and also faces significantly more scrutiny from regulators.

TOP-DOWN ENVIRONMENTAL CONSIDERATIONS

Agriculture and livestock are responsible for ~14% of total GHGE, and rising beef demand could add another 15% of methane and 5% of carbon footprint in the next 30 years. Global beef consumption is one of the leading environmental threats, and sustainability concerns are on the rise, especially with younger consumers. Traditional feedlot beef production is especially detrimental to the environment as it accounts for far more GHGE per gram of protein compared to grains, pulses, and other meats.

EXHIBIT 1: GREENHOUSE GAS EMISSIONS PER GRAM OF PROTEIN

Consumer preferences are constantly evolving and industries have to work to stay relevant and adapt to such changes. This applies to the Food Products Industry more so than many others. The rise of alternative, primarily plant-based meat poses unique opportunities as well as challenges for new and old players in the industry. Many of these opportunities and challenges can be tied back to larger ESG trends and issues facing society.

When looking at substitutes for traditional meat, options generally fall within two categories: alternative meat and lab-based meat. Alternative meat is plant- (soy, pea, wheat, rice, etc.) based protein that mimics the taste of real meat. Currently popular brands include Beyond Meat and Impossible Burger.

For example, Beyond Meat uses pea protein and the Impossible Burger uses soy with heme (genetically engineered yeast) that imitates the taste and texture of beef.

KEY POINTS

- Alternative meats are expected to grow from 1% to 10% of the $1.4T global meat market over the next 10 years.
- Alternative meats are growing significantly faster than the larger traditional meat category.
- Around 30% of US consumers plan on reducing their meat consumption, and 32% consider themselves flexitarian (semi-vegetarian).
- Due to its lower water intensity and lower Greenhouse Gas Emissions (GHGE) compared to traditional meats, alternative meat has the potential to directly contribute to Sustainable Development Goals 2, 6, and 13.
- Alternative meat is still a niche market with few pure-plays. The segment is positioned to benefit from the shift towards healthy eating, increasing environmental awareness, and concerns for animal welfare.

EXHIBIT 1: GREENHOUSE GAS EMISSIONS PER GRAM OF PROTEIN

Source: Clark & Tilman. As of 2017.
Further, grain-fed beef requires over 15000 liters of water to produce 1 kilogram. The vast majority of the water is used for the production of animal feed. Pulses, cereals, and oil crops (such as soy), that are often the main ingredients of alternative meats, require materially less water to produce the same quantity.

EXHIBIT 2: WATER INTENSITY OF DIFFERENT FOOD CATEGORIES

As a result, switching to plant-based meat alternatives could significantly reduce GHGE as well as society’s impact on water scarcity and thus partially alleviate climate change concerns. Additionally, while consumer sentiment gradually shifts towards sustainability, companies are adding alternate meat products to highlight their environmental initiatives.

Plant-based foods can still cause significant climate stress, however, although in a different form. For instance, several alternative meat products rely on the use of palm oil, which has been garnering public attention because of illegal and unsustainable deforestation, which contributes to climate change and threatens animal habitats.

TOP DOWN SOCIAL CONSIDERATIONS

Cattle are most profitable when grown fast. This has increased controversial practices such as feeding unnatural grains (corn and soy), antibiotic use, and restrictive living conditions (feedlots) that eliminate natural grazing and produce more tender meat. Consumers around the world are becoming increasingly aware of and concerned with such practices and issues regarding animal welfare in general.

EXHIBIT 3: CONSUMER ATTENTION TO ANIMAL WELFARE LABELS

Further, plant-based meat is well-positioned to benefit from a global trend towards healthy and socially-conscious eating. Red meat generally has more saturated fat, which contribute to higher blood cholesterol and higher risk of heart disease. Around 30% of US consumers plan on reducing their meat consumption, and 32% consider themselves flexitarian (semi-vegetarian).

There may be potential downsides to plant-based meats. While, alternative meat has zero cholesterol, it has 5 times more sodium for preservation and flavor. Further, taste and price are still the leading drivers of consumer purchase, rather than health, and both Beyond Meat and Impossible Burger currently cost more than standard ground beef.

INDUSTRY DEVELOPMENTS

The alternative meat segment is comprised of smaller and less established pure plays (such as Beyond Meat and Impossible Burger), as well as large conglomerates newly entering the space (such as Kellogg, Nestle, and Tyson Foods). This space has seen and should continue to see significant investments, led by start-ups, mainstream food companies and restaurants.
In response to shifting consumer sentiment, an increasing number of US burger chains have started to offer meatless burgers in order to attract younger diners who prioritize sustainability and health. 15% of US burger chains are currently offering meatless alternatives, up from 3% in 2018.

However, while pure plays are garnering most of the media attention in recent months, they may not be the biggest beneficiaries from a potential shift in consumer tastes, and established firms could end up being the biggest winners. Considering existing advantages—e.g., infrastructure and production capabilities—the best way to benefit from a potential mock meat shift might be to own traditional food products companies.

ARE ESG SCORES A NEW MEASURE OF QUALITY?

KEY POINTS

• Investors' prefer lower-quality and lower ESG-rated securities early in bull markets and higher quality and higher ESG-rated companies as bull markets mature.
• Interpreting and integrating ESG scores differently and more effectively than other investors may produce capital market technologies with actionable portfolio management implications across a variety of investment strategies.
• We believe there is growing opportunity for ESG scores as a non-financial measurement of quality.

One long-running tenet of FI's investment philosophy holds that long-term success requires interpreting information differently—and more correctly—than the vast majority of investors. We believe ESG scores open a new avenue on this front. ESG scores are calculated from security factors that widely-used financial statements don't easily capture.

There is a vigorous debate occurring in the investment community about whether highly rated ESG firms may provide durable risk reduction or alpha generation opportunities over time—with most findings being somewhat underwhelming or inconclusive (Exhibit 1).

“Our research shows that markets favor different characteristics at different points in the market cycle. We think ESG quality should be no different.”

Average: 50%

Source: FactSet and MSCI ESG Manager. As of December 2019. "High ESG Scoring Companies" is a company with a total ESG score above 7. "Low ESG Scoring Companies" is a company with a score below 3. Outperformance is based on total returns higher than the MSCI ACWI.

However, this may be the wrong question to ask, as it presumes there is one superior investment characteristic or style throughout a market cycle. Because markets deal efficiently with widely known information, including leadership trends, it seems unlikely any one category or characteristic of stocks would provide enduring superior risk-adjusted returns for a long, uninterrupted stretch. Such advantages tend to get priced in relatively quickly.

Our research shows that markets favor different characteristics at different points in the market cycle. We think ESG quality should be no different. Our prior studies on quality—which we define using measures of return on equity, earnings variability and debt-to-equity ratios—indicate investors’ prefer lower-quality securities early in bull markets and higher quality as bull markets mature. Further, we noticed our proprietary measurement of quality correlated particularly well with MSCI ESG scores in Emerging Markets. EM
companies with higher quality exposures—via Return on Equity, Earnings Variability and Debt to Equity—tend to have higher ESG Scores.

We saw this as a unique opportunity to merge these two concepts in an effort to use ESG scores as a non-financial measurement of quality. We analyzed the relative returns of MSCI ACWI constituent stocks by ESG score in this bull market, as ACWI constituents are normally distributed across ESG scores. An ESG quality index comparing the relative returns of the best third (high quality) of ESG scores against the bottom third (low quality) showed promising results: Low quality outperformed early on, while high quality outperformed thereafter—just as we would expect (Exhibit 2).

The results invite further analysis of ESG data as an alpha-generation source. Unfortunately, ESG scoring data is limited to this current bull market, so it is difficult to know whether these quality trends produced similar results in prior cycles. But at the bare minimum, we think these results are an encouraging start to the incorporation of non-financial quality measures in security selection for alpha-generation purposes.

EXHIBIT 2: COMPANIES WITH HIGH ESG SCORES AND QUALITY EXPOSURE UNDERPERFORM EARLY AND OUTPERFORM LATE

HOW CAN WE BALANCE ESG AND PERFORMANCE GOALS?

Matt Simpson
Capital Markets Innovation Research Analyst

Year to date, ESG criteria had a modest impact on stock performance, with only a 0.58% marginal difference in returns of our MSCI World ESG Index and the standard MSCI World Index. Despite minimal performance deviation, 13% of the MSCI World is screened out based on Fisher Investments ESG criteria.

While any outperformance is noteworthy, it’s important to differentiate what this means and what it does not (Exhibit 1).

EXHIBIT 1: ESG CRITERIA MINIMALLY IMPACT YTD PERFORMANCE

EXHIBIT 2: ESG FACTORS CONTRIBUTION TO RELATIVE PERFORMANCE

WHAT PERFORMANCE DEVIATIONS MEAN

This slight performance dispersion gives us some insight towards ESG-specific trends. In looking at categorical restrictions, we see that restricting exposure to war-torn Myanmar and companies subject to controversies helped. On the other hand, companies with stricter labor rights and lack of weapons exposure detracted from relative performance to the benchmark. Notably, MSCI controversies and failure to comply with the UN Global Compact were among the top contributors to performance (Exhibit 2). As these are broad assessments, a company can be flagged for violating these criteria for a number of reasons, making this a powerful, though non-specific tool to measure equities with.

*Removing ESG non-compliant securities causes fewer securities in the ESG Index, increasing weights per ESG compliant position.

Source: MSCI ESG Manager. As of October 2019.
The performance dispersion is largely driven by relative weighting. For example, Wells Fargo was assigned an MSCI Controversy surrounding its creation of false accounts and returned only 15% this year, underperforming the World’s 21%. Excluding it helped the ESG Index, assigning positive relative performance to our MSCI Controversy category.

Continuing to study these effects, and tracing them to underappreciated fundamentals may reveal both headwinds and tailwinds for stock performance that we can apply to our top-down management.

WHAT PERFORMANCE DEVIATIONS DO NOT MEAN

Defining performance is insightful, but there’s no way to guarantee always beating the market, ESG included. The performance effect assigned to our restrictions cannot be taken without additional context. For example, taking a closer look at restricting exposure to Myanmar shows a performance dispersion driven largely by Chevron and Total. Two energy companies – the worst performing sector this year. And to complicate matters, energy hasn’t only had losers; Hess Corporation, for example, returned over 60% in 2019. Are Chevron and Total underperforming because they are behaving like most of their energy peers, or is there something in particular about business dealings in Myanmar that affects performance? It’s hard to say, but this particular analyst looks forward to continually asking and answering these difficult questions, finding capital markets technologies that add value to ethically-minded investors.
FISHER INVESTMENTS
ENVIRONMENTAL STEWARDSHIP
WHAT IS THE FISHER INVESTMENTS GREEN TEAM?

Kate Sibley
Request for Proposal Team Leader

HOW CAN FISHER INVESTMENTS IMPROVE OUR ENVIRONMENTAL IMPACT?

- Building energy efficiency
- Campus environmental preservation
- Employee environmental engagement
- Business meeting sustainability

As a firm, Fisher is looking for ways to promote our green values both internally and externally to support our ESG efforts. The Fisher Green Team is a group of volunteer employees from throughout the firm who have been tasked with answering the following opportunity statement – How can Fisher Investments improve our environmental impact? In other words, how can FI focus on the “E” in ESG, both in our company, on our campuses and amongst our employee base?

The Green Team was first chartered with brainstorming potential “green ideas” big or small. The team was given about a month to research and gather as many plausible ideas as possible, and then presented them to a panel of Executive Vice Presidents (EVPs) – Justin Arbuckle, Lane Jarvis, and David Watts.

The result was four ‘buckets’ of ideas presented to the panel of EVPs, breaking down implementation into short, medium and long term stages. The Green Team pitched over twenty-five ideas in the following categories: building improvements, sustainability initiatives for campus buildings, human capital, and client and prospect meetings.

Our progress on our sustainability initiatives will be reported in 2020.
MEASURING THE ENERGY EFFICIENCY OF OUR OFFICE BUILDING
Recently, the Green Team conducted an Energy Star benchmark for the Fisher Creek 2 (FC2) building – where our institutional department resides in our Camas headquarters. The Energy Star benchmark uses the EPA’s energy performance scale to assess building energy performance and track savings over time. For those not familiar with Energy Star benchmarking, it is a ranking system offered by the Environmental Protection Agency (EPA) that compares similar commercial building types across the nation and ranks them on a scale of 1 – 100. The score helps building owners and operators understand how energy efficient their buildings are in comparison to peers across the nation and establishes a baseline of performance that can be used in the future to measure the impact of any improvements that are made to the facilities. Buildings that score a 50 are considered average performing and those that score a 75 or greater are considered energy efficient and able to be certified as such. After collecting 13+ months of utility bills and specific building characteristics FC2, the Green Team was able to associate an Energy Star score of 94 for FC2 (Exhibit 1).

WHY IS OUR BUILDING’S ENERGY EFFICIENCY IMPORTANT?
As a firm, we are looking for ways to promote our green values both internally and externally to support our ESG efforts. By reducing overall energy consumption in a building where energy is the single largest controllable operating cost, we have the potential to reduce the carbon footprint the buildings make on the environment.

“After collecting 13+ months of utility bills and specific building characteristics for the Fisher Creek 2 building, we calculated an Energy Star score of 94.”

IMPROVING THE SUSTAINABILITY OF OUR PRINTED MATERIALS
In an effort to be as environmentally conscious as possible with the materials used throughout our ESG meetings:
- We have made iPads available for institutional meetings to mitigate printed materials.
- While we use recycled paper (10% recycled) for all materials, we have used paper composed of a higher percentage (30%) of recycled materials for ESG materials since 2017.
- In an effort to work with companies that protect the rights of their employees, we have also chosen to work with a unionized vendor to print our ESG paper.
- We use double-sided printing for ESG materials to reduce the size and weight of paper ESG books.
Our firm’s dedication to sustainability can be seen in the 2010–2014 construction and development of our Camas, Washington corporate campus. A key goal during the development process aimed was preserving and enhancing the existing wetlands and natural habitat.

**DURING THE CONSTRUCTION OF THE FISHER CREEK CAMPUS**

- Preserve and Enhance over 130 acres of on-site wetlands
- Planted over 5,000 wetland plants and 2,000 shrubs during development
- Planted over 400 trees while clearing fewer than 40 in order to prepare the land for development

Wetlands on the Fisher Creek campus

**ENVIROMENTAL STEWARDSHIP AT FISHER**

**ENERGY EFFICIENCY OF CAMAS OFFICE BUILDINGS**

- The most energy-efficient commercial building in the surrounding Clark County, WA area.²
- Equipped with a computer system that tracks all power consumption.³
- Self-Dimming Sustainable Lighting: System controls shut lights off in unused conference rooms and adjusts the brightness of internal lighting so that areas near windows that require less light, receive less light.⁴
- Features customized windows that reduce solar heat and lower power usage for heating/cooling, and feature HVAC systems that use only outside air 80% of the time to provide cooling.
- Storm water handling system that purifies water from the parking lots and the roads, through natural bioswales and large filters.⁵

Fisher Creek campus

² According to Clark Public Utilities who gave Fisher Camas buildings a 100% efficiency rating.
³ The building has “smart” cooling and heating systems that learn through experience. The system is zoned on every floor so that heating and cooling of each zone maintains consistent temperatures throughout each floor.
⁴ Self-Dimming lighting system maintains consistent and balanced lighting on the floors. This process of adjusts every 3 minutes and is gradual and unnoticed by the naked eye.
⁵ There is no city storm sewer system for rain water runoff in the local area. In fact, water from Pacific Rim Boulevard and adjoining properties; actually drain onto the Fisher Camas Creek property. After purification the system feeds the retained water into ponds that then control water release into Fisher Creek.
HOW CAN WE MAKE BUSINESS TRAVEL MORE SUSTAINABLE?

FISHER INVESTMENTS CARBON OFFSET INITIATIVE
Carbon offsetting is a method designed to lighten the impact of greenhouse gas emissions that result from the use of fossil fuels by reducing emissions from another source.

We purchase carbon offsets for each mile flown during Fisher Investments Institutional travel. Carbon offsetting allows us to experiment with ways of counterbalancing the carbon emissions generated from Institutional employees’ travel by contributing to emission reduction projects focused on energy efficiency, production of renewable energy, forest conservation and avoided deforestation.

United Airlines partnered with Sustainable Travel International to develop their carbon offset program. Sustainable Travel International has a policy of only selecting carbon offset projects that have obtained independent third-party verification and are registered with long-standing and well respected carbon quantification protocols.

2018 CARBON OFFSET PROJECTS SUPPORTED¹
Capricorn Ridge Wind Farm
The Capricorn Ridge Wind Farm is located in west central Texas and is comprised of over 400 wind turbines. Support of Capricorn Ridge Wind Farm helps to displace fossil fuel based energy with clean, renewable wind power.

The wind farm produces enough wind based electricity to:
• Power approximately 220,000 homes annually
• Facilitate the reduction of more than 952,000 metric tons of annual greenhouse gas emissions—equivalent to taking approximately 186,000 cars off the road

The Capricorn Ridge Wind Farm is an independently verified carbon offset project registered with the Voluntary Carbon Standard.

Alto Mayo Conservation Initiative
The carbon pollution generated from burning and clearing tropical forests is comparable to the greenhouse gas emissions from all of the world’s cars, trucks, and planes combined. The Alto Mayo Conservation Initiative works to restore and protect 450,000 acres of the Alto Mayo Protected Forest, thereby reducing tropical deforestation in the San Martín region of northern Peru – an area twice the size of New York City.
The goal of the Alto Mayo Conservation Initiative is to:
• Provide sustainable economic opportunities to local families in the area
• Protect a critical watershed that supports the 240,000 inhabitants of the Alto Mayo Basin
• Protect the Alto Mayo Protected Forest (home to over 1,000 unique species)

Currently more than 200 local families have pledged not to cut down the Alto Mayo’s trees, in return for agricultural training and related benefits. For example, local community members have already benefitted from technical assistance and training in organic coffee production.

The Alto Mayo Conservation Initiative project was successfully validated under the Verified Carbon Standard and the Climate, Community and Biodiversity Standards through an independent audit of the project’s design and methodology.

FISHER INVESTMENTS
Fisher Asset Management, LLC, doing business as Fisher Investments (FI), is a leading independent investment adviser registered with US Securities and Exchange Commission (US SEC). As of December 31, 2019, FI and its subsidiaries managed over $120 billion.

FISHER INVESTMENTS DUBAI INTERNATIONAL FINANCIAL CENTRE
Fisher Investments, DIFC Branch (FI DIFC) is regulated by the Dubai Financial Services Authority (DFSA). FI DIFC may only undertake the financial services activities that fall within the scope of its existing DFSA license. This document is intended for Professional Clients or Market Counter parties only as defined by the DFSA and no other person should act upon it. This document is for information purposes only. It does not constitute or form part of any marketing initiative, any offer to issue or sell, or any solicitation of any offer to subscribe or purchase, any products, strategies or other services nor shall it or the fact of its distribution form the basis of, or be relied on in connection with, any contract resulting therefrom. In the event that the recipient of this document wishes to receive further information with regard to any products, strategies other services, it shall specifically request the same in writing from us.

FISHER INVESTMENTS EUROPE
Fisher Investments Europe Limited (FIE) is authorized and regulated by the Financial Conduct Authority (191609). It is registered in England, Company Number 3850593. FIE is wholly owned by FI, which is wholly owned by Fisher Investments, Inc. FIE delegates portfolio management to FI. FI’s Investment Policy Committee is responsible for all strategic investment decisions. FIE’s Investment Oversight Committee (IOC) is responsible for overseeing FI’s management of portfolios that have been delegated to FI.

FISHER INVESTMENTS IRELAND
Fisher Investments Ireland Limited (FII) is a private limited company incorporated in Ireland (Company Number 623847) and is regulated by the Central Bank of Ireland. FII partially outsources aspects of the day-to-day investment advice, portfolio management, and trading functions to its affiliates. In particular, preparation of investment suitability reports will be partially conducted by FIE and the day-to-day portfolio strategy decision-making will be conducted by FI.

FISHER INVESTMENTS AUSTRALASIA
Fisher Investments Australasia Pty Ltd (FIA) (ACN: 159 670 667) holds an Australian Financial Services License (#433312) with the Australian Securities and Investment Commission (ASIC). FIA is wholly owned by FI. FIA delegates portfolio management to its parent company, FI. This material is designed for use with wholesale prospective clients and clients.

FISHER INVESTMENTS JAPAN
Fisher Investments Japan (FIJ) is registered as a Financial Instruments Business Operator with the Japan Financial Services Agency under Director-General of Kanto Local Finance Bureau (Financial Instruments Firm No. 2766), and is a member of Japan Investment Advisers Association. Fisher Investments Japan (FIJ) serves as the investment manager, and delegates a portion of the portfolio management function to FI subject to the oversight of the FIJ Portfolio Engineer. FIJ was established in Tokyo Japan in 2015 as a wholly-owned subsidiary of FI.
