

Subject: **ASCX 400: Standing Whale Project**

There's still time to register for [ASCX 400 - *Standing Whale*](#) project taking place this Fall. This course has been specifically designed for Arts and Science students with 4th year standing and you may use this course to fulfill an upper-year core course requirement.

In this course, you will work in a multidisciplinary team to bring [Edward Burtynsky's](#) (a world-renowned Canadian photographer) public art piece titled *Standing Whale* to life in Kingston. This is a true-to-size, re-imagining of a blue whale skeleton, standing 5 stories high, and **it aims to bring awareness to the impact that humans are having on our planet.**

In teams of 3-5, students will take on the full scope of a project, from ideation to project design and development. You will be supported by experienced, subject matter experts who will act as team mentors while you learn to apply a variety of disciplinary knowledge to your *Standing Whale* project. Throughout the course, you'll also develop in-demand skills such as leadership, collaborative problem solving, project management, and the experience of working with an external organization.

Interested in enrolling? Please send an email to asc.el@queensu.ca with your full name, degree of study and student number. Please refer to the [ASCX 400 webpage](#) for additional information.
