Researcher mobility is a critical element of the construction of European Research Area. Several models for mobility schemes are used in Europe (at national and European levels), covering a large scale and scope, from the early-stage researcher to the recognised/established researcher and beyond. These mobility opportunities are open to researchers from all over the world regardless of nationality.

By fostering transatlantic exchange of researchers (including PhD and postdoc candidates), these schemes contribute to training researchers in addition to stimulating and supporting research partnerships and institutional cooperation beyond the world of academia.
