

Markerless motion capture at home!

What will I need?

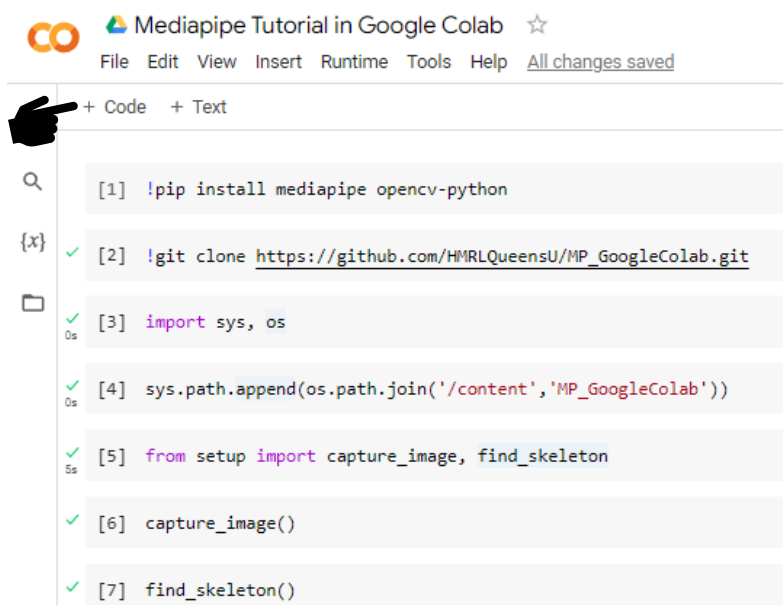

A webcam

A computer with internet access

Instructions:

1. First, go to <https://colab.research.google.com/> and sign in with your Google account.
2. Click on the “New Notebook” button or go to “File” > “New Notebook” to create a new Python notebook.
3. Type in the following code, using the “+ Code” button to create a new line of code:

```

[1] !pip install mediapipe opencv-python
[2] !git clone https://github.com/HMRLQueensU/MP_GoogleColab.git
[3] import sys, os
[4] sys.path.append(os.path.join('/content', 'MP_GoogleColab'))
[5] from setup import capture_image, find_skeleton
[6] capture_image()
[7] find_skeleton()
  
```

4. Go to “Runtime” > “Run all” to execute the code you just created!

Note: your web browser may ask for access to your webcam. When prompted, click “Allow”:

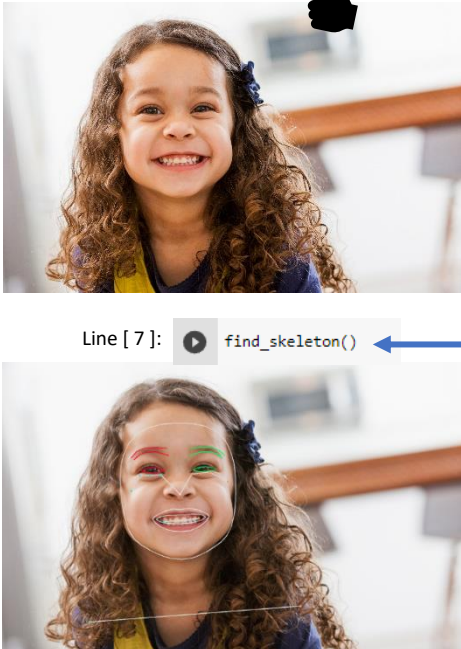

5. Try new poses by clicking the “Run” button on line [6] and line [7].

When finished, you can safely close your browser. Your photos will be deleted automatically, so be sure to save the ones you liked!

Click capture!

Line [6]: `capture_image()`

Line [7]: `find_skeleton()`

Observe your results!

Access our example code online!
