Research Casting International (RCI), located in Trenton Ontario, is one of the world's largest providers of Museum Technical Services and is dedicated to the restoration and preservation of some of the most significant paleontological specimens, skeletons, and artifacts around.

This year, RCI is thrilled to be bringing a life-size Orca (Killer Whale) skeleton replica.

Specimen Mounting

The world's foremost Natural History museums have continuously entrusted our professional skeleton crew to mold and mount their most valuable paleontological specimens. Our services include custom metal fabrication, sculpting, finishing and painting. We specialize in shaping steel to fit inside cast materials and incorporating machine keyways in the mount for easy assembly and disassembly.

Killer Whales (Orcinus orca) are best known for their distinct black-and-white patterned bodies. Orcas are a highly social and intelligent species and they can be found in all of the world's oceans. Their streamlined bodies, powerful teeth and jaws, and excellent echolocation skills make orcas strong predators. Some feed exclusively on fish, while others hunt marine mammals like seals and other species of dolphins.
