

Letter of Information

Study Title:

U-Flourish: Developing and evaluating student mental health support pathways and transitions
Well-Being Platform (*powered by i-spero*)

Principal Investigator:

Dr. Anne Duffy
Division of Student Mental Health
Student Health Services
Department of Psychiatry
Queen's University

Funder:

Grant from the Canadian Institutes of Health Research (CIHR)

Background and purpose of the study

You are invited to participate in a research study investigating *the acceptability and utility of digital resources to support university student well-being*. These resources have been helpful in the general population of young adults and provide support for common well-being and mental health-related challenges. The purpose of this study is to understand if these resources are acceptable and of benefit in supporting university student well-being and academic performance. This study is funded by the CIHR and has been reviewed for ethical compliance by Queen's University Health Sciences and Affiliated Teaching Hospitals Research Ethics Board (HSREB) (PSIY-739-22).

What will happen in the study?

Your participation in this study is voluntary. For the duration of the current academic year as part of this research, all consenting undergraduate and graduate students at Queen's University will have free access to effective digitalized well-being resources. Specifically, these digital resources include: an adapted digital platform (i-spero) for students to customize well-being goals and plans, self-monitor their progress and have access to digital resources which offer support for (i) improving sleep quality, (ii) managing stress and anxiety, and (iii) improving study-life balance. Please see <https://www.queensu.ca/u-flourish/u-flourish-digital-well-being-resources> for detailed information about each digital resource.

If you are already using the U-Flourish Digital Well-Being App then you can continue to do so over the current academic year. If you are new to the U-Flourish Digital Well-Being App and would like to access any of the well-being resources, you can do so by creating a secure account in i-spero® [<https://www.queensu.i-spero.com/>] using your Queen's University email address (ending in @queensu.ca). i-spero® is a new digital technology that supports self-monitoring and provides access to well-being apps and administers electronic study measures before and following the use of these resources in order to evaluate them from the student perspective. After registering and providing consent to take part, you will be provided with brief electronic questionnaires to complete that ask about your demographics (i.e. age, sex, gender), personal and family history of mental disorders, current well-being, and common mental health symptoms. The questionnaires should take about 5 minutes to complete, but there is no time limit and you can take as long as you need. You will then be invited to set up your own well-being plans and/or select the digital resource(s) of your choosing. You can also opt to use this App for your own well-being monitoring purposes and a brief, introductory video will familiarize you with how to use the App and view your own electronically reported information.

Depending on the digital well-being resource(s) you select, you may be asked some additional questions. The U-Flourish Digital Well-Being App (*powered by i-Spero*) will generate automated feedback based on your responses and provide access to the resource of your choosing.

Once you have selected the digital resource you wish to use, the Well-Being App will provide a secure URL link to access the resource. As part of the research, the Well-Being App will ask you to complete an additional brief electronic Student Experience Survey every 6 weeks after you start using a resource. The questions will ask about your experience using the resource and any access to mental health care.

The well-being plans and resources we offer are “self-guided” meaning that **your progress and responses will not be monitored by the research team and the research team cannot accept responsibility for your mental health care.**

To understand the association between your use of the resources and your academic outcomes, your survey responses will be linked via your student number to university administrative (e.g. program and year of study) and academic data (e.g. course grades, withdrawal, academic sanctions). To understand the association between use of the digital resources and use of other mental health resources, your questionnaire responses will also be linked to administrative data from your electronic medical record at student health services (should you have accessed help for a mental health problem) via your student number. Extracted data will be strictly limited to routinely collected administrative service use data to estimate wait times and number of visits by provider type (e.g. family doctor, counsellor or mental health consultant). The research team will not extract any personal health data, such as diagnoses. Further, if you have completed at least one of the [U-Flourish Surveys](#) your App data will be linked to survey data through your student number so that we can understand better which students use the App and for whom it is helpful.

At the end of the current academic year, you will be prompted as to whether or not you would like to continue to use the U-Flourish Well-Being App over the next academic year. Reminder emails and instructions about how to reactivate your i-spero account for the next academic year will be sent to your university email monthly up until the first week of September, after which your i-spero account will become inactive. We are funded to study the acceptability and usefulness of this Digital Student Well-Being App (powered by i-spero) for four academic years ending August 31, 2026. However, you can stop using it at any time.

Are there any risks to doing this study?

All of the resources on offer have been previously evaluated for use among young adults. We feel risks are minimal in this study. We have also followed all regulations in terms of safeguarding your data (see Confidentiality and research data section below). While every effort will be made to protect the privacy of your information, absolute confidentiality cannot be guaranteed. This does not limit the duty of the researchers and others to protect your privacy. Some of the questions in electronic surveys may cause upset or bring up painful memories. If you experience any distress from participating in this study you may stop the survey at any time, or skip any upsetting questions. If your distress continues after leaving the survey, we have provided a list of supportive services that can be helpful at the end of this Letter. These resources are also listed at the end of each baseline survey, on the U-Flourish Well-Being App platform, and on the QSWS website (<https://www.queensu.ca/studentwellness/resources>).

Your symptom and well-being entries are not monitored by the research team and the research team cannot accept responsibility for your care.

Are there any benefits to doing this study?

There may be benefits to your well-being and mental health through use of the available digital resources. i-spero will send automated messages based on your own entries to suggest appropriate resources that might be helpful. We also hope that the study findings will help us together improve resources and services available to support university students' well-being and academic success moving forward.

Payment or reimbursement

Access to our resources is offered free of charge for all Queen's University students through an in-kind contribution by the resource developers and through CIHR research grant funding. As a thank you for your participation in this research, you will be offered a Starbucks e-gift card worth \$5 for completing all study measures up to 8-weeks including the Student Experience Questionnaire at week 6. In addition, each time you complete the core weekly and monthly measures (i.e., the GAD-2, PHQ-2, and WEMWBS-7), we will automatically enter you into a draw to win 1 of 5 iPads, valued at \$450.00 CAD (i.e., up to eight entries per student). Starbucks e-gift cards will be sent and the draw for iPads will occur at the end of each academic year in May.

Confidentiality and use of research data

Please be assured that your survey answers will be kept strictly confidential. Participants confidentiality will be protected to the extent permitted by the applicable laws. For this study, we are collaborating with several external groups (data processors) in the UK including, Big Health and P1Vital (the provider of i-spero) who host the digital resources we are making available and will process the data you input. The collection of your personal identifiable information is minimal (i.e., student email). Further, all information they hold will be encrypted and password protected and will only be accessible by vetted individuals. The information you enter into the resources will be kept strictly confidential.

The data you provide will be held securely on data processor servers during the study. At the end of the study, encrypted data files will be securely transferred for analysis. These external groups will store data only up until deletion is requested by our research team, after all relevant data has been safely transferred to us. All data collected in Sleepio or Daylight will be anonymised after 5 years. If you wish to have any data collected within Sleepio or Daylight deleted, you can request this by emailing privacy@bighealth.com who will aim to process your request within 30 days. Our collaborators acknowledge their requirement to: (i) comply with the applicable privacy legislation and (ii) maintain adequate safeguards and inform us if there is a breach of these safeguards.

The information you input will be linked to administrative health and academic data through your student number. Specifically, your Well-Being App data will be linked to administrative health data from your electronic medical record (EMR) at Queen's Student Wellness Services (QSWs). This will allow us to evaluate the transition to mental health care for students in the study who try to access mental health care. Extracted data will be strictly limited to routinely collected health administrative data needed to estimate wait times and pathways to and through mental health related appointments (e.g. time to see family doctor, counsellor or mental health consultant). The research team will not extract any personal health data such as diagnoses or treatment. Academic outcome data linked in this study will include course grades, overall grade percentage, rate of failed courses, and any instance of academic probation or suspension. We may also link your Well-Being Platform data with your [U-Flourish Survey](#) data if you have completed at least one U-Flourish Survey.

Encrypted password protected data files will be stored on password-protected university computers. Data will be stored separately from student email addresses provided. Study data will be assigned a unique identifier so that individuals cannot be identified in any analysis. Reports of this study will use group data and will not discuss individual information. Only members of the research team at Queen's University will

have access to the data following data transfer. However, the HSREB may require access to study records to monitor the ethical conduct of the research.

Data will be securely stored on university servers for a minimum of 5 years after study close and de-identified data will be stored in a secure university research data repository indefinitely. We may collaborate with other researchers at other institutions to analyze de-identified study data. Researchers from inside and outside of Canada can apply to access this de-identified information for research purposes only.

What if I change my mind about being in the study?

Your participation is voluntary, and you are free to withdraw at any time. You can stop using our digital well-being resources at any point. Even if you choose to take part, you can withdraw from the study and have all your data removed without penalty and without giving a reason at any time until the point of publication. In addition, you can decline to participate in any aspect of the research without impact on your academic standing. You just need to tell us by emailing flourish@queensu.ca. Furthermore, you can delete your i-spero account or digital resource accounts with the app providers at any time. Your decision whether or not to be part of the study will not affect your access to other university supports or your academic standing.

How do I find out what was learned in this study?

This study is expected to complete by September 2026 unless renewed funding is secured. If you would like a brief summary of the results, please write to us by email to request information. We will share findings in manuscripts and through the Queen's Journal, social media and our website:

<https://www.queensu.ca/u-flourish>

Questions about the study?

Any questions about study participation may be directed to the investigators and their research team through the study email: flourish@queensu.ca. Alternatively, you could contact the lead investigator Dr. Anne Duffy at 613-533-2508 directly. If you have any concerns about your rights as a research participant please contact - Dr. Dean A. Tripp, Chair of the Queen's University HSREB at 1-844-535-2988 (toll free in North America) or email HSREB@queensu.ca.

We want to thank you for considering taking part in this research! The responses you and other students provide will identify areas where we can improve education and health promotion resources to support well-being and academic success among university students.

IMPORTANT MENTAL HEALTH SERVICES INFORMATION

IMPORTANT MENTAL HEALTH SERVICES INFORMATION

IN A LIFE OR DEATH EMERGENCY

If you are experiencing suicidal thoughts and think that you might be unable to keep yourself safe, visit your nearest hospital emergency department or call 911.

IF YOU ARE IN CRISIS

If you are in crisis and cannot wait to receive medical attention or are unsure what to do, call Addiction and Mental Health Services KFL&A at 613-544-4229 (local) or Crisis Services Canada at 1-833-456-4566 (Canada-wide).

SEXUAL ASSAULT AND VIOLENCE

Queen's University has an office of Sexual Violence Prevention and Response Services. If you are unsure or have experienced any form of sexual assault or violence you can connect with them through: <https://www.queensu.ca/sexualviolencesupport/>

Queen's SWS has a counsellor who specializes in sexual assault. To make an appointment, call 613-533-2506.

Sexual Assault Centre Kingston (SACK) has crisis & support services available 24/7 by phone 1-877-544-6424. [Chat and text support](#) is also available.

IF YOU ARE IN NEED OF NON-URGENT CARE

If you are concerned about your mental health and are in need of non-urgent care, there are several options you might consider.

Your family doctor

Book an appointment with your family doctor. They can offer advice or refer you to other more specific services to get help.

Queens University Student Wellness Services

If you do not have a family doctor, Student Wellness Services can offer a range of services, including counselling and medical assessment and treatment. The Counselling Service can help you address personal or emotional problems that are getting in the way of having a positive experience at Queen's University and realising your full academic and personal potential. Services are free and confidential. It is important to know that the Counselling Service is not just for those with a diagnosis: you can contact them for any reason. To make an appointment, call 613-533-2506.

For further information about the services provided by Queen's Student Wellness Services please visit: <http://queensu.ca/studentwellness/health-services>
